1 Inleiding

1.1 Algemeen

Woningstichting Eigen Haard heeft in samenspraak met gemeente Amsterdam Stadsdeel West een uitwerkingsplan gemaakt voor het Middengebied van de Kolenkitbuurt. Het uitwerkingsplan geeft ruimte aan een gevarieerd woningaanbod en aan een brede schoolontwikkeling aan de Bos en Lommerweg.

De ligging van het plangebied met de bestaande situatie is weergegeven in afbeelding 1. In afbeelding 2 is een impressie weergegeven van het uitwerkingsplan.

Afbeelding 1: Bestaande situatie plangebied

Afbeelding 2: Impressie uitwerkingsplan

Het gebied biedt in de huidige situatie ruimte aan 361 huurwoningen en 8 bedrijfsruimten. Het uitwerkingsplan voorziet in 480 woningen in de sociale en de vrije sector, bedrijfsmatige functies en sociaal maatschappelijke functies, waaronder een brede schoolontwikkeling.

Het uitwerkingsplan kan op basis van het vigerende bestemmingsplan Kolenkitbuurt (2007) niet worden gerealiseerd. Een nieuw bestemmingsplan is derhalve noodzakelijk. In verband met deze ruimtelijke procedure is een akoestisch onderzoek nodig naar geluid afkomstig van verkeer op omliggende wegen en de nabijgelegen ringlijn en naar geluid afkomstig van het gezoneerde industrieterrein Westpoort.

Het verloop van het onderzoek, de resultaten en hieruit te trekken conclusies zijn verwerkt in onderliggend rapport.

1.2 Leeswijzer

De rapportage is als volgt opgebouwd:

- in hoofdstuk 2 beschrijven we het toetsingskader
- de onderzoeksopzet komt aan de orde in hoofdstuk 3;
- in hoofdstuk 4 belichten we de onderzoeksresultaten;
- in hoofdstuk 5 tenslotte vatten we de belangrijkste conclusies van dit onderzoek samen.

2 Algemeen wettelijk kader

In de Wet geluidhinder (Wgh) is vastgelegd dat wanneer de gemeente een nieuw bestemmingsplan vaststelt, de grenswaarden uit de Wgh in acht moeten worden genomen. Daarbij wordt onderscheid gemaakt tussen de volgende bronnen van geluid:

- wegverkeer;
- railverkeer;
- industrie.

2.1.1 Wegverkeer

Wettelijke zone

De Wet geluidhinder (Wgh) is alleen van toepassing binnen de wettelijk vastgestelde zone van de weg. De breedte van de geluidzone langs wegen is geregeld in artikel 74 Wgh en is gerelateerd aan het aantal rijstroken van de weg en het type weg (stedelijk of buitenstedelijk). De ruimte boven en onder de weg behoort eveneens tot de zone van de weg. De betreffende zonebreedtes zijn in tabel 2.1 weergegeven.

Tabel 2.1 Zonebreedte wegverkeer

| Aantal rijstroken | Zonebreedte [m] | |
|-------------------|------------------|------------------------|
| | Stedelijk gebied | Buitenstedelijk gebied |
| 5 of meer | - | 600 |
| 3 of meer | 350 | - |
| 3 of 4 | - | 400 |
| 1 of 2 | 200 | 250 |

Het stedelijk gebied wordt in de Wgh gedefinieerd als 'het gebied binnen de bebouwde kom doch voor de toepassing van de hoofdstukken VI en VII met uitzondering van het gebied binnen de bebouwde kom, voor zover liggend binnen de zone van een autoweg of autosnelweg'. Dit laatste gebied valt onder het buitenstedelijk gebied.

Binnen de zone van een weg dient een akoestisch onderzoek plaats te vinden naar de geluidbelasting op de binnen de zone gelegen woningen en andere geluidgevoelige bestemmingen. Bij het berekenen van de geluidbelasting wordt de L_{den} -waarde in dB bepaald.

De berekende geluidbelasting dient getoetst te worden aan de grenswaarden van de Wet geluidhinder. Indien de (voorkeurs)grenswaarde wordt overschreden, dient beoordeeld te worden of maatregelen ter beperking van het geluid mogelijk zijn. Als maatregelen niet mogelijk zijn, kan een hogere grenswaarde te worden vastgesteld door het college van Burgemeester en Wethouders.

In artikel 82 en volgende worden de grenswaarden vermeld met betrekking tot nieuwe situaties bij zones. In tabel 2.2 zijn deze waarden (voorkeursgrenswaarden en de maximaal toelaatbare hogere grenswaarde) opgenomen.

Tabel 2.2 Grenswaarden voor woningen langs een bestaande weg

| Status van de woning | Voorkeursgrenswaarde [dB] | Maximale ontheffing [dB] | |
|-----------------------------------|---------------------------|--------------------------|-----------------|
| | | Stedelijk | Buitenstedelijk |
| nieuw te bouwen woningen | 48 | 63 | 53 |
| vervangende nieuwbouw | 48 | 68 | 58* |
| nieuw te bouwen agrarische woning | 48 | 58 | 58 |
| nieuw te bouwen school | 48 | 63 | 58 |

* : vervangende nieuwbouw langs auto(snel)weg binnen bebouwde kom 63 dB

Aftrek ex artikel 110g Wet geluidhinder

Ingevolge artikel 110g van de Wet geluidhinder dient het resultaat van berekening en meting van de geluidbelasting vanwege wegverkeer te worden gecorrigeerd met een aftrek in dB.

De hoogte van de aftrek is geregeld in artikel 3.6 van het 'Reken- en Meetvoorschrift geluidhinder 2006'. Op basis van dit voorschrift dient voor wegen waarvoor de representatief te achten snelheid van lichte motorvoertuigen 70 km/uur of meer bedraagt, een aftrek van 2 dB te worden toegepast. Voor de overige zoneplichtige wegen bedraagt de aftrek 5 dB.

2.1.2 Railverkeerslawaai

Wettelijke zone

Ook voor het railverkeer geldt dat de Wet geluidhinder alleen van toepassing is binnen de wettelijk vastgestelde zone. De breedte van deze zone is per spoortraject vastgelegd in het Besluit geluidhinder (Bg). De breedte van de geluidzone langs het spoor wordt geregeld in artikel 1.4 Bg en is vastgelegd in een door ministeriële regeling vastgestelde kaart.

Binnen de zone van een spoorweg dient een akoestisch onderzoek plaats te vinden naar de geluidbelasting op de binnen de zone gelegen woningen en andere geluidgevoelige bestemmingen. Bij het berekenen van de geluidbelasting wordt de L_{den} -waarde in dB bepaald.

De L_{den} -waarde is het energetisch en naar de tijdsduur van de beoordelingsperiode gemiddelde van de volgende drie waarden:

- Het geluidniveau in de dagperiode (tussen 7.00 en 19.00 uur);
- het geluidniveau in de avondperiode (tussen 19.00 en 23.00 uur) + 5 dB;
- het geluidniveau in de nachtperiode (tussen 23.00 en 07.00 uur) + 10 dB.

De berekende geluidbelasting dient getoetst te worden aan de grenswaarden van het Besluit geluidhinder. Indien de (voorkeurs)grenswaarde wordt overschreden, dient beoordeeld te worden of maatregelen ter beperking van het geluid mogelijk zijn en/of er een hogere grenswaarde moet worden vastgesteld door het college van Burgemeester en Wethouders.

In artikel 4.9 en volgende van het Besluit geluidhinder worden de grenswaarden vermeld met betrekking tot nieuwe situaties bij zones. In tabel 2.3 zijn deze waarden (voorkeursgrenswaarde en de maximaal toelaatbare hogere grenswaarde) opgenomen.

Tabel 2.3 Grenswaarden voor woningen en andere geluidgevoelige bestemmingen langs een bestaande spoorweg

| Geluidgevoelige bestemming | Voorkeursgrenswaarde [dB] | Maximale ontheffing [dB] |
|-------------------------------------|---------------------------|--------------------------|
| woningen | 55 | 68 |
| andere geluidgevoelige bestemmingen | 53 | 68 |

2.1.3 Industrie

Wettelijke zone

Overeenkomstig de Wet geluidhinder is de gemeente verplicht een zone vast te stellen rond elk binnen de gemeente gelegen terrein dat de mogelijkheid van vestiging van zogenaamde van inrichtingen die in belangrijke mate geluidhinder kunnen veroorzaken (voorheen A-inrichtingen). Deze zoneringsplichtige inrichtingen zijn in het Inrichtingen- en Vergunningenbesluit (Ivb) aangewezen. In onderhavige situatie is industrieterrein Westpoort geluidgezoneerd met een geluidzone die reikt tot over de planlocatie.

De Wet geluidhinder kent voor onderhavige situatie grenswaarden voor industrielawaai zoals weergegeven in onderstaande tabel 2.4.

Tabel 2.4 Overzicht grenswaarden industrielawaai

| Situatie | Grenswaarde [dB(A)] | |
|---|----------------------|---------------------|
| | Voorkeursgrenswaarde | Maximale ontheffing |
| Geluidgevoelige bestemmingen in de vorm van woningen | 50 | 55 |
| Geluidgevoelige bestemmingen in de vorm van onderwijsgebouwen | 50 | 60 |

2.2 Geluidbeleid Gemeente Amsterdam

Als aanvulling op de in paragraaf 2.1 beschreven wet- en regelgeving heeft de gemeente Amsterdam geluidbeleid (mei 2008) ontwikkeld dat van toepassing is op de Amsterdamse praktijk. De volgende punten zijn relevant voor onderhavig onderzoek:

- In het hogere waarden besluit wordt conform artikel 110 a lid 5 van de Wet geluidhinder¹ gemotiveerd waarom geluidbeperkende maatregelen redelijkerwijs niet of in onvoldoende mate realiseerbaar zijn. Hoe groter de overschrijding, hoe uitgebreider de motivatie;
- Nieuwe woningen, waarvoor een hogere grenswaarde wordt vastgesteld, dienen in principe een stille zijde te krijgen. Een stille zijde wordt gedefinieerd als een gevel (of geveldeel) die niet rechtstreeks wordt belast met een geluidniveau boven de voorkeursgrenswaarde. Wanneer van dat uitgangspunt wordt afgeweken, wordt in het hogere grenswaarden besluit een motivatie opgenomen. Hoe groter de overschrijding, hoe uitgebreider de motivatie;
- Woningen die gerealiseerd worden met een zogenaamde “dove”gevel of vliesgevel dienen altijd een stille zijde te krijgen behoudens in zeer uitzonderlijke gevallen zoals tijdelijke situaties. Een stille zijde wordt gedefinieerd als een gevel (of geveldeel) die niet rechtstreeks wordt belast met een geluidniveau boven de voorkeursgrenswaarde;
- Bij de vaststelling van een hogere waarde wordt rekening gehouden met de samenloop (cumulatie) van de geluidbelasting van verschillende bronnen. In het hogere waarde besluit zal gemotiveerd moeten worden op welke wijze met deze samenloop rekening is gehouden bij de te treffen maatregelen. Er treedt een onaanvaardbare geluidbelasting op als de gecumuleerde waarde meer dan 3 dB hoger is dan de hoogste van de maximaal toegestane ontheffingswaarden.

2.3 Toetsingskader plansituatie

2.3.1 Wegverkeerslawaai

In dit stadium is nog niet bekend of in de zin van de Wet geluidhinder sprake zal zijn van vervangende nieuwbouw of van een nieuwe situatie. Derhalve is in onderhavig onderzoek worst case uitgegaan van een nieuwe situatie met een lagere maximaal te ontheffen grenswaarde in vergelijking met vervangende nieuwbouw. Voor de te realiseren woningen en school bedraagt de voorkeursgrenswaarde 48 dB en de maximaal te ontheffen grenswaarde 63 dB tengevolge van alle wegen behalve de Ring A10 West. Voor deze (auto)snelweg geldt een maximaal te ontheffen grenswaarde van 53 dB.

¹ In artikel 110a lid 5 van de Wet geluidhinder is vermeld dat hogere grenswaarden pas kunnen worden vastgesteld indien toepassing van maatregelen, gericht op het terugdringen van de geluidbelasting onvoldoende doeltreffend zal zijn of overwegende bezwaren ontmoet van stedenbouwkundige, verkeerskundige, vervoerskundige, landschappelijke of financiële aard.

2.3.2 Railverkeerslawaai

In onderhavig onderzoek bedraagt met betrekking tot railverkeerslawaai de voorkeursgrenswaarde 55 dB voor woningen en 53 dB voor andere geluidgevoelige bestemmingen (school). De maximaal te ontheffen grenswaarde bedraagt 68 dB voor zowel woningen als voor andere geluidgevoelige bestemmingen (school).

2.3.3 Industrielawaai

In onderhavig onderzoek bedraagt met betrekking tot industrielawaai de voorkeursgrenswaarde 50 dB(A) voor zowel woningen als voor scholen. De maximaal te ontheffen grenswaarde bedraagt voor woningen 55 dB(A) en voor scholen 60 dB(A).

2.3.4 Rekenresultaten gecumuleerd (alle bronnen opgeteld)

In onderhavig onderzoek is ook de gecumuleerde geluidbelasting (L_{cum}) bepaald. Bij de toetsing van de berekende gecumuleerde geluidbelasting wordt aansluiting gezocht bij het Amsterdams geluidbeleid, dat bij de vaststelling van een hogere waarde rekening houdt met de samenloop (cumulatie) van de geluidbelasting van verschillende bronnen. Hierbij wordt aangetekend dat een onaanvaardbare geluidbelasting optreedt als de gecumuleerde waarde meer dan 3 dB hoger is dan de hoogste van de maximaal toegestane ontheffingswaarden. Deze maximaal toegestane ontheffingswaarde (railverkeerslawaai) bedraagt 68 dB, de maximaal toelaatbare gecumuleerde waarde bedraagt derhalve 71 dB.

3 Onderzoeksopzet en uitgangspunten

3.1 Onderzoeksgebied

Het gebied biedt in de huidige situatie ruimte aan 361 huurwoningen en 8 bedrijfsruimten. Het uitwerkingsplan voorziet in 480 woningen in de sociale en de vrije sector, bedrijfsmatige functies en sociaal maatschappelijke functies, waaronder een brede schoolontwikkeling aan de Bos en Lommerweg.

Bij dit akoestisch onderzoek is het volgende document als uitgangspunt gehanteerd:

- Uitwerkingsplan Middengebied Kolenkitbuurt, Amsterdam West, d.d. 02-11-2011.

3.2 Rekenmethode

Voor de effectbeschrijving van het spoor en de wegen zijn akoestische berekeningen uitgevoerd. Deze berekeningen dienen ter bepaling van de geluidbelasting op de gevels van de nieuwbouwwoningen.

Voor het bepalen van het geluidniveau vanwege het rail- en wegverkeer zijn twee wettelijk vastgestelde rekenmethodes voorhanden: de Standaardrekenmethode I en de Standaardrekenmethode II uit het 'Reken- en Meetvoorschrift geluidhinder 2006' ex artikel 110d van de Wet geluidhinder, kortweg aangeduid als SRM I respectievelijk SRM II.

De SRM II is een rekenmethode waarbij rekening kan worden gehouden met afscherming van objecten, hetgeen met de SRM I niet mogelijk is. De berekeningen voor het onderzoek zijn dan ook uitgevoerd conform SRM II. De berekeningen zijn uitgevoerd met één reflectie en een sectorhoek van 2 graden.

In onderhavig onderzoek zijn de betreffende spoorwegen, de wegen en de directe omgeving ingevoerd in een grafisch computermodel dat rekent volgens de Standaardrekenmethode II uit het 'Reken- en Meetvoorschrift geluidhinder 2006'. Daarbij is gebruik gemaakt van het programma Geomilieu 1.91.

Het zonebeheersmodel (eveneens in SRM II) van geluidgezoneerd industrieterrein Westpoort is aangeleverd door de gemeente Amsterdam. De relevante bronnen op dit industrieterrein zijn geïmplementeerd in de omgeving.

De onderzoeksopzet en de invoergegevens zijn in de onderstaande alinea's nader toegelicht.

3.3 Invoergegevens

3.3.1 Algemeen

Voor de berekening van de geluidbelasting vanwege het spoor en het wegverkeer op de gevels van de nieuw te realiseren woningen zijn twee berekeningsmodellen opgezet; een model voor railverkeerslawaai en een voor wegverkeerslawaai. In beide modellen zijn de omliggende bebouwing, bodemgebieden en de relevante spoortrajecten dan wel de relevante wegen opgenomen.

Met lokale verschillen in maaiveldhoogte is in onderhavig onderzoek rekening gehouden.

Voor het onderzoeksgebied is uitgegaan van een verharde bodem ($B_f = 0,0$). De onverharde bodemgebieden (groenstroken) zijn als akoestisch zacht ingevoerd ($B_f = 1,0$).

De gebouwen in de omgeving van de nieuw te realiseren woningen zijn in de berekeningen zowel afschermend als reflecterend meegenomen.

De ontvangerpunten zijn zo gelegen dat ze een representatief beeld geven van de geluidbelasting. Bij de berekeningen is uitgegaan van een ontvangerhoogte van 1,50 meter (begane grond) boven lokaal maaiveld. Voor elke volgende verdieping is, afhankelijk van de gebouwhoogte, de ontvangerhoogte steeds met 3 meter verhoogd.

3.3.2 Specifieke invoergegevens weg

Met behulp van het berekeningsmodel zijn puntberekeningen uitgevoerd voor het prognosejaar 2022. In tabel 3.1 zijn de gehanteerde verkeersgegevens weergegeven. De gehanteerde verkeersgegevens zijn afkomstig van de gemeente Amsterdam en weergegeven in bijlage 1.

De maximum snelheid bedraagt op alle genoemde wegen 50 km/uur, behalve op de Ring A10 West, waar een snelheidsregime van 100 km/uur geldt. In de berekeningen is voor de Bos en Lommerweg, de Burgemeester de Vlughtlaan, de Wiltzanghlaan en de Leeuwendalersweg uitgegaan van het akoestisch referentiewegdek. Op de Akbarstraat is in de berekeningen vanwege de aanwezigheid van klinkers uitgegaan van het wegdektype gewone elementenverharding. Op de Ring A10 West is uitgegaan van dubbellaags ZOAB. Op de kruising Bos en Lommerlaan - Op-/afrit A10 West is in verband met de aanwezigheid van verkeerslichten een kruispuntcorrectie van 1 gehanteerd.

De gegevens over de langs de Ring A10 aanwezige geluidsschermen (positie, hoogte) zijn afkomstig van Rijkswaterstaat (via de gemeente Amsterdam).

In de geluidsberekeningen is rekening gehouden met de barriers tussen de hoofdbanen Ring A10 en tussen de hoofdbanen Ring A10 en de parallelbanen. Vanwege de taps toelopende vorm van de barriers zijn de barriers als een 60% reflecterend scherm ingevoerd.

Een gedetailleerd overzicht van de invoergegevens wordt gegeven in bijlage 2.

3.3.3 Specifieke invoergegevens spoor (rail/metro)

Het bouwplan is gelegen binnen de geluidzone van twee spoortrajecten, namelijk traject 385 (Burgemeester de Vlughtlaan - Amsterdam Sloterdijk) en traject 490 (Amsterdam Zuid - Amsterdam Sloterdijk). De zonebreedte voor deze trajecten bedraagt respectievelijk 100 meter en 400 meter.

De gegevens betreffende de intensiteiten op de sporen, snelheden en trajectkenmerken zijn ontleend aan het akoestisch spoorboekje ASWIN versie 2009 (gegevens 2006, 2007 en 2008).

Om de geluidbelasting in 2022 te berekenen is conform richtlijnen van ProRail en vooruitlopend op toekomstige wetgeving (geluidproductieplafonds) uitgegaan van het driejaargemiddelde van de jaren 2006, 2007 en 2008, vermeerderd met 1,5 dB. De gegevens hieromtrent zijn deels afkomstig uit ASWIN 2011 (railverkeer) en deels aangeleverd door de gemeente Amsterdam (metro). De gemeente Amsterdam heeft aangegeven dat zowel in noordelijke richting als in zuidelijke richting 360 bakken (3 bakken per metrostel) rijden tussen 06.00 uur en 01.00 uur. Tevens is door de gemeente aangegeven dat de bovenbouw van de metrolijn bestaat uit betonnen dwarsliggers.

De gegevens over de langs het spoorrail aanwezige geluidsschermen zijn aangeleverd door ProRail. Gegevens met betrekking tot de geluidsschermen langs de metrolijn zijn afkomstig van de gemeente Amsterdam.

Een gedetailleerd overzicht van de invoergegevens wordt gegeven in bijlage 2.

3.3.4 Specifieke invoergegevens industrie

De basis van de bepaling van de geluidbelasting tengevolge van geluidgezoneerd industrieterrein Westpoort vormt het door de gemeente Amsterdam aangeleverde zonemodel (IL-Westpoort Amsterdam, d.d. 12 april 2012). De geluidbronnen uit dit zonemodel zijn derhalve in onderhavig onderzoek overgenomen.

Een gedetailleerd overzicht van de invoergegevens wordt gegeven in bijlage 2.

4 Resultaten, toetsing en hogere waarde

4.1 Rekenresultaten en toetsing wegverkeerslawaai

Met behulp van het berekeningsmodel is de geluidbelasting vanwege het wegverkeer op de relevante wegen berekend voor het prognosejaar 2022.

De berekeningsresultaten zijn voor alle wegen per ontvangerpunt weergegeven in bijlage 3 tot en met 7. In de onderstaande tabellen zijn de ontvangerpunten met de hoogste geluidbelasting weergegeven.

Tabel 4.1 Geluidbelasting vanwege de Bos en Lommerweg / Burgemeester de Vlughtlaan (inclusief tramlijn), inclusief aftrek ex artikel 110g Wgh

| Punt | Omschrijving | Hoogte [m] | Geluidbelasting 2022 [dB] |
|-------|--------------------|------------|---------------------------|
| 167_C | ontvangerpunt zuid | 7,5 | 63 |
| 194_B | ontvangerpunt zuid | 4,5 | 63 |
| 194_C | ontvangerpunt zuid | 7,5 | 63 |
| 212_C | ontvangerpunt zuid | 7,5 | 63 |

Ten gevolge van het wegverkeer op de Bos en Lommerweg / Burgemeester de Vlughtlaan (inclusief tramlijn) bedraagt de geluidbelasting ten hoogste 63 dB, waarmee de voorkeursgrenswaarde van 48 dB wordt overschreden. De maximaal te ontheffen geluidbelasting van 63 dB wordt echter niet overschreden.

Tabel 4.2 Geluidbelasting vanwege de Leeuwendalersweg, inclusief aftrek ex artikel 110g Wgh

| Punt | Omschrijving | Hoogte [m] | Geluidbelasting 2022 [dB] |
|-------|---------------------|------------|---------------------------|
| 109_A | ontvangerpunt noord | 1,5 | 52 |
| 111_A | ontvangerpunt noord | 1,5 | 52 |
| 112_A | ontvangerpunt noord | 1,5 | 52 |
| 113_A | ontvangerpunt noord | 1,5 | 52 |

Ten gevolge van het wegverkeer op de Leeuwendalersweg bedraagt de geluidbelasting ten hoogste 52 dB, waarmee de voorkeursgrenswaarde van 48 dB wordt overschreden. De maximaal te ontheffen geluidbelasting van 63 dB wordt echter niet overschreden.

Tabel 4.3 Geluidbelasting vanwege de Wiltzanghlaan, inclusief aftrek ex artikel 110g Wgh

| Punt | Omschrijving | Hoogte [m] | Geluidbelasting 2022 [dB] |
|-------|---------------------|------------|---------------------------|
| 084_B | ontvangerpunt noord | 4,5 | 59 |
| 999_A | ontvangerpunt noord | 1,5 | 59 |
| 999_B | ontvangerpunt noord | 4,5 | 59 |
| 999_C | ontvangerpunt noord | 7,5 | 59 |

Ten gevolge van het wegverkeer op de Wiltzanghlaan bedraagt de geluidbelasting ten hoogste 59 dB, waarmee de voorkeursgrenswaarde van 48 dB wordt overschreden. De maximaal te ontheffen geluidbelasting van 63 dB wordt echter niet overschreden.

Tabel 4.4 Geluidbelasting vanwege de Akbarstraat, inclusief aftrek ex artikel 110g Wgh

| Punt | Omschrijving | Hoogte [m] | Geluidbelasting 2022 [dB] |
|--------|--------------------|------------|---------------------------|
| 057a_B | ontvangerpunt oost | 4,5 | 57 |
| 069_B | ontvangerpunt oost | 4,5 | 57 |
| 070_B | ontvangerpunt oost | 4,5 | 57 |
| 072_B | ontvangerpunt oost | 4,5 | 57 |

Ten gevolge van het wegverkeer op de Akbarstraat bedraagt de geluidbelasting ten hoogste 57 dB, waarmee de voorkeursgrenswaarde van 48 dB wordt overschreden. De maximaal te ontheffen geluidbelasting van 63 dB wordt echter niet overschreden.

Tabel 4.5 Geluidbelasting vanwege de Ring A10 West, inclusief aftrek ex artikel 110g Wgh

| Punt | Omschrijving | Hoogte [m] | Geluidbelasting 2022 [dB] |
|--------|---------------------|------------|---------------------------|
| 078_E | ontvangerpunt noord | 13,5 | 50 |
| 210_F | ontvangerpunt oost | 16,5 | 50 |
| 211_F | ontvangerpunt oost | 16,5 | 51 |
| 212a_F | ontvangerpunt oost | 16,5 | 51 |

Ten gevolge van het wegverkeer op de Ring A10 West bedraagt de geluidbelasting ten hoogste 51 dB, waarmee de voorkeursgrenswaarde van 48 dB wordt overschreden. De maximaal te ontheffen geluidbelasting van 53 dB wordt echter niet overschreden.

4.2 Rekenresultaten en toetsing spoorlawaai (rail- en metroverkeer)

Met behulp van het berekeningsmodel is de geluidbelasting vanwege het spoorlawaai op de trajecten 385 (Burgemeester de Vlugtlaan - Amsterdam Sloterdijk) en traject 490 (Amsterdam Zuid - Amsterdam Sloterdijk) berekend voor het prognosejaar 2022. De berekeningsresultaten zijn per ontvangerpunt weergegeven in bijlage 8. In tabel 4.6 zijn de ontvangerpunten met de hoogste geluidbelasting weergegeven.

Tabel 4.6 Geluidbelasting vanwege railverkeer (gemiddelde van '06, '07 en '08 + 1,5 dB)

| Punt | Omschrijving | Hoogte [m] | Geluidbelasting 2022 [dB] |
|--------|--------------------|------------|---------------------------|
| 001b_B | ontvangerpunt west | 22,5 | 68 |
| 002b_B | ontvangerpunt west | 22,5 | 68 |
| 994b_A | ontvangerpunt west | 19,5 | 68 |
| 999b_B | ontvangerpunt west | 22,5 | 68 |

Uit de rekenresultaten blijkt dat de geluidbelasting vanwege spoorlawaai op trajecten 385 (Burgemeester de Vlugtlaan - Amsterdam Sloterdijk) en traject 490 (Amsterdam Zuid - Amsterdam Sloterdijk) ten hoogste 68 dB bedraagt waarmee de voorkeursgrenswaarde van 55 dB wordt overschreden. De maximaal te ontheffen geluidbelasting van 68 dB wordt echter niet overschreden.

4.3 Rekenresultaten en toetsing industrielawaai

Met behulp van het berekeningsmodel is de geluidbelasting vanwege industrielawaai afkomstig van geluidgezoneerd industrieterrein Westpoort berekend. De berekeningsresultaten zijn per ontvangerpunt weergegeven in bijlage 9. In tabel 4.7 zijn de ontvangerpunten met de hoogste geluidbelasting weergegeven.

Tabel 4.7 Geluidbelasting vanwege geluidgezoneerd industrieterrein Westpoort

| Punt | Omschrijving | Hoogte [m] | Geluidbelasting 2022 [dB(A)] |
|-------|---------------------|------------|------------------------------|
| 079_C | ontvangerpunt noord | 7,5 | 52 |
| 079_D | ontvangerpunt noord | 10,5 | 52 |
| 079_E | ontvangerpunt noord | 13,5 | 52 |
| 080_E | ontvangerpunt noord | 13,5 | 52 |

Uit de rekenresultaten blijkt dat de geluidbelasting vanwege geluidgezoneerd industrieterrein Westpoort ten hoogste 52 dB bedraagt. De voorkeursgrenswaarde van 50 dB wordt hiermee overschreden, de maximale ontheffingswaarde van respectievelijk 55 dB voor woningen en 60 dB voor scholen niet.

4.4 Hogere grenswaarde wegverkeerslawaai

Bij wegen met een zone wordt in artikel 110a (Wgh) en volgende aangegeven onder welke voorwaarden hogere grenswaarden kunnen worden verleend. Er kan uitsluitend een hogere grenswaarde worden vastgesteld indien toepassing van maatregelen, gericht op het terugbrengen van de geluidbelasting vanwege een weg, onvoldoende doeltreffend zal zijn dan wel overwegende bezwaren ontmoet van stedenbouwkundige, verkeerskundige, vervoerskundige, landschappelijke of financiële aard.

Om de geluidbelasting vanwege een weg te beperken, kunnen de volgende maatregelen worden getroffen:

- Maatregelen aan de bron door middel van het toepassen van een geluidarm wegdektype;
- Maatregelen in het overdrachtsgebied (tussen bron en ontvanger) door middel van het toepassen van een geluidscherm/grondwal;
- Maatregelen aan de ontvanger door middel van het toepassen van schermen aan of nabij de gevel, het toepassen van 'dove' gevels, en dergelijke.

Onderstaand is indicatief weergegeven op welke wijze maatregelen kunnen worden getroffen om de geluidbelasting tengevolge van de verschillende wegen terug te brengen. Ook is aangegeven of het aannemelijk is of deze maatregelen doelmatig zullen zijn. Een uitgebreid maatregelenonderzoek met kosten-baten analyses is in onderhavig onderzoek niet voorzien.

4.4.1 **Beperking geluidbelasting tengevolge van de Bos en Lommerweg / Burg. de Vlughtlaan**

Gelet op de overschrijding van de voorkeursgrenswaarde van 48 dB vanwege het wegverkeer op de Bos en Lommerweg / Burgemeester de Vlughtlaan (inclusief tramlijn), kan een hogere grenswaarde worden vastgesteld door het college van burgemeester en wethouders. Daarbij kunnen de waarden zoals vermeld in bijlage 3 worden vastgesteld. Onderstaand is indicatief weergegeven op welke wijze maatregelen kunnen worden getroffen om de geluidbelasting tengevolge van de Bos en Lommerweg / Burgemeester de Vlughtlaan (inclusief tramlijn) terug te brengen.

Bronmaatregelen:

Het wegdek van de Bos en Lommerweg / Burgemeester de Vlughtlaan (inclusief tramlijn) bestaat uit referentiewegdek (DAB 0/16). Reductie van de geluidbelasting kan worden gerealiseerd door het vervangen hiervan door een stil wegdektype (dunne dekklagen, ZOAB e.d.). Het toepassen van deze maatregel kan leiden tot een geluidreductie van 3 dB, waardoor nog niet aan de voorkeursgrenswaarde wordt voldaan. Tevens strekt het tot de mogelijkheid het verkeer op de betreffende weg te beperken.

Het toepassen van dergelijke maatregelen is ingrijpend en brengt hoge kosten met zich mee, waardoor het niet aannemelijk is dat het toepassen van deze maatregel doelmatig is.

Overdrachtsmaatregelen:

Om de geluidbelasting op de geluidgevoelige bestemmingen in voldoende mate terug te brengen, is gezien de hoogte van de te realiseren bouwblokken (tot 5 verdiepingen) een relatief hoog geluidscherm benodigd. Gezien de omgeving van het plangebied (binnenstedelijk) heeft het toepassen van een dergelijk scherm een grote ruimtelijke impact. Hierdoor is het niet aannemelijk dat het toepassen van deze maatregel doelmatig is.

4.4.2 Beperking geluidbelasting tengevolge van de Leeuwendalersweg

Gelet op de overschrijding van de voorkeursgrenswaarde van 48 dB vanwege het wegverkeer op de Leeuwendalersweg, kan een hogere grenswaarde worden vastgesteld door het college van burgemeester en wethouders. Daarbij kunnen de waarden zoals vermeld in bijlage 4 worden vastgesteld en dienen onderstaande mogelijke maatregelen te worden afgewogen. Onderstaand is indicatief weergegeven op welke wijze maatregelen kunnen worden getroffen om de geluidbelasting tengevolge van de Leeuwendalersweg terug te brengen.

Bronmaatregelen:

Het wegdek van de Leeuwendalersweg bestaat uit referentiewegdek (DAB 0/16). Reductie van de geluidbelasting kan worden gerealiseerd door het vervangen hiervan door een stil wegdektype (dunne deklagen, ZOAB e.d.). Het toepassen van deze maatregel kan leiden tot een geluidreductie van 3 dB, waardoor nog niet aan de voorkeursgrenswaarde wordt voldaan. Tevens strekt het tot de mogelijkheid het verkeer op de betreffende weg te beperken. Het toepassen van dergelijke maatregelen is ingrijpend en brengt hoge kosten met zich mee, waardoor het niet aannemelijk is dat het toepassen van deze maatregel doelmatig is.

Overdrachtsmaatregelen:

Om de geluidbelasting op de geluidgevoelige bestemmingen in voldoende mate terug te brengen, is gezien de hoogte van de te realiseren bouwblokken (tot 5 verdiepingen) een relatief hoog geluidscherm benodigd. Gezien de omgeving van het plangebied (binnenstedelijk) heeft het toepassen van een dergelijk scherm een grote ruimtelijke impact. Hierdoor is het niet aannemelijk dat het toepassen van deze maatregel doelmatig is.

4.4.3 Beperking geluidbelasting tengevolge van de Wiltzanghlaan

Gelet op de overschrijding van de voorkeursgrenswaarde van 48 dB vanwege het wegverkeer op de Wiltzanghlaan, kan een hogere grenswaarde worden vastgesteld door het college van burgemeester en wethouders. Daarbij kunnen de waarden zoals vermeld in bijlage 5 worden vastgesteld en dienen onderstaande mogelijke maatregelen te worden afgewogen. Onderstaand is indicatief weergegeven op welke wijze maatregelen kunnen worden getroffen om de geluidbelasting tengevolge van de Wiltzanghlaan terug te brengen.

Bronmaatregelen:

Het wegdek van de Wiltzanghlaan bestaat uit referentiewegdek (DAB 0/16). Reductie van de geluidbelasting kan worden gerealiseerd door het vervangen hiervan door een stil wegdektype (dunne deklagen, ZOAB e.d.). Het toepassen van deze maatregel kan leiden tot een geluidreductie van 3 dB, waardoor nog niet aan de voorkeursgrenswaarde wordt voldaan. Tevens strekt het tot de mogelijkheid het verkeer op de betreffende weg te beperken. Het toepassen van dergelijke maatregelen is ingrijpend en brengt hoge kosten met zich mee, waardoor het niet aannemelijk is dat het toepassen van deze maatregel doelmatig is.

Overdrachtsmaatregelen:

Om de geluidbelasting op de geluidgevoelige bestemmingen in voldoende mate terug te brengen, is gezien de hoogte van de te realiseren bouwblokken (tot 5 verdiepingen) een relatief hoog geluidscherm benodigd. Gezien de omgeving van het plangebied (binnenstedelijk) heeft het toepassen van een

dergelijk scherm een grote ruimtelijke impact. Hierdoor is het niet aannemelijk dat het toepassen van deze maatregel doelmatig is.

4.4.4 Beperking geluidbelasting tengevolge van de Akbarstraat

Gelet op de overschrijding van de voorkeursgrenswaarde van 48 dB vanwege het wegverkeer op de Akbarstraat, kan een hogere grenswaarde worden vastgesteld door het college van burgemeester en wethouders. Daarbij kunnen de waarden zoals vermeld in bijlage 6 worden vastgesteld en dienen onderstaande mogelijke maatregelen te worden afgewogen. Onderstaand is indicatief weergegeven op welke wijze maatregelen kunnen worden getroffen om de geluidbelasting tengevolge van de Akbarstraat terug te brengen.

Bronmaatregelen:

Het wegdek van de Akbarstraat bestaat uit gewone elementenverharding. Reductie van de geluidbelasting kan worden gerealiseerd door het vervangen hiervan door een stiller wegdektype (DAB, dunne dekplaten, ZOAB e.d.). Het toepassen van deze maatregel kan leiden tot een geluidreductie van 7 dB, waardoor nog niet aan de voorkeursgrenswaarde wordt voldaan. Tevens strekt het tot de mogelijkheid het verkeer op de betreffende weg te beperken. Het toepassen van dergelijke maatregelen is ingrijpend en brengt hoge kosten met zich mee, waardoor het niet aannemelijk is dat het toepassen van deze maatregel doelmatig is.

Overdrachtsmaatregelen:

Om de geluidbelasting op de geluidgevoelige bestemmingen in voldoende mate terug te brengen, is gezien de hoogte van de te realiseren bouwblokken (tot 5 verdiepingen) een relatief hoog geluidscherm benodigd. Gezien de omgeving van het plangebied (binnenstedelijk) heeft het toepassen van een dergelijk scherm een grote ruimtelijke impact. Hierdoor is het niet aannemelijk dat het toepassen van deze maatregel doelmatig is.

4.4.5 Beperking geluidbelasting tengevolge van de Ring A10 West

Gelet op de overschrijding van de voorkeursgrenswaarde van 48 dB vanwege het wegverkeer op de Ring A10 West, kan een hogere grenswaarde worden vastgesteld door het college van burgemeester en wethouders. Daarbij kunnen de waarden zoals vermeld in bijlage 7 worden vastgesteld en dienen onderstaande mogelijke maatregelen te worden afgewogen. Onderstaand is indicatief weergegeven op welke wijze maatregelen kunnen worden getroffen om de geluidbelasting tengevolge van de Ring A10 West terug te brengen.

Bronmaatregelen:

Het wegdek van de Ring A10 West bestaat uit dubbellaags ZOAB. Verdere doorvoering van maatregelen aan het wegdektype zijn ingrijpend en brengen hoge kosten met zich mee. Tevens strekt het tot de mogelijkheid het verkeer op de betreffende weg te beperken. Dit lijkt gezien de functie die de Ring A10 West vervult in de verkeersafwikkeling geen reële optie. Het is derhalve niet aannemelijk dat het toepassen van bronmaatregelen aan de Ring A10 West doelmatig is.

Overdrachtsmaatregelen:

Langs de Ring A10 West zijn reeds diverse schermen gerealiseerd, veelal met een hoogte van 6 meter boven lokaal maaiveld. Het plaatsen van extra schermen of het ophogen van bestaande schermen is ingrijpend en brengt hoge kosten met zich mee. Hierdoor is het niet aannemelijk dat het toepassen van deze maatregel doelmatig is.

4.5 Hogere grenswaarde railverkeerslawaai

Gelet op de overschrijding van de voorkeursgrenswaarde van 55 dB voor de woningen en van 53 dB voor overige geluidgevoelige bestemmingen, dient beoordeeld te worden of er maatregelen ter beperking van het geluid mogelijk zijn.

Indien blijkt dat maatregelen niet doelmatig zijn, kan het college van burgemeester en wethouders een hogere grenswaarde vaststellen. Daarbij kunnen de waarden zoals vermeld in bijlage 8 worden

vastgesteld en dienen onderstaande mogelijke maatregelen te worden afgewogen. Een uitgebreid maatregelenonderzoek met kosten-baten analyses is in onderhavig onderzoek niet voorzien.

Bronmaatregelen:

Maatregelen aan de bron kunnen worden getroffen in de vorm van het toepassen van raildempers. Deze maatregel kan alleen in overleg met de railinfrabeheerder worden getroffen. Dergelijke maatregelen brengen hoge kosten met zich mee en zijn ingrijpend, waardoor het niet aannemelijk is dat het toepassen van dergelijke maatregelen doelmatig is.

Overdrachtsmaatregelen:

Langs de spoortrajecten 385 en 490 zijn reeds diverse schermen gerealiseerd. Het plaatsen van extra schermen of het ophogen van bestaande schermen is ingrijpend en kan slechts plaatsvinden in overleg met de railinfrabeheerder. Tevens brengen dergelijke maatregelen hoge kosten met zich mee, waardoor het niet aannemelijk is dat het toepassen van deze maatregel doelmatig is.

4.6 Hogere grenswaarde industrielawaai

Gelet op de overschrijding van de voorkeursgrenswaarde van 50 dB voor woningen vanwege geluidgezoneerd industrieterrein Westpoort, kan een hogere grenswaarde worden vastgesteld door het college van burgemeester en wethouders. Daarbij kunnen de waarden zoals vermeld in bijlage 9 worden vastgesteld en dienen onderstaande mogelijke maatregelen te worden afgewogen. Onderstaand is indicatief weergegeven op welke wijze maatregelen kunnen worden getroffen om de geluidbelasting tengevolge van het industrieterrein terug te brengen.

Bronmaatregelen:

De geluidzone van geluidgezoneerd industrieterrein Westpoort is gesitueerd zuidelijk van het plangebied. Het inperken van deze geluidzone door maatregelen te treffen aan de verschillende bronnen is zeer ingrijpend en moeilijk realiseerbaar. Hierdoor lijkt het niet aannemelijk dat bronmaatregelen doelmatig zijn.

Overdrachtsmaatregelen:

Het treffen van maatregelen in het overdrachtsgebied door middel van het toepassen van een geluidscherm langs het industrieterrein, zal het geluid vanwege het industrielawaai beperken. Omdat echter sprake is van een groot geluidindustrieterrein is een relatief lang scherm benodigd. Dergelijke maatregelen brengen hoge kosten met zich mee en zijn ingrijpend, waardoor het niet aannemelijk is dat het toepassen van dergelijke maatregelen doelmatig is.

4.7 Aanwezigheid geluidluwe gevels met geluidbelastingen onder de voorkeursgrenswaarde

In het Amsterdams geluidbeleid is aangegeven dat nieuwe woningen, waarvoor een hogere grenswaarde wordt vastgesteld, in principe altijd een stille zijde dienen te krijgen. Een stille zijde wordt gedefinieerd als een gevel (of geveldeel) die niet rechtstreeks wordt belast met een geluidniveau boven de voorkeursgrenswaarde.

Uit de rekenresultaten blijkt dat de geluidgevoelige bestemmingen binnen alle bouwblokken aan dit criterium voldoen. De in afbeelding 3 gepresenteerde bouwblokken vormen hierop een uitzondering.

Afbeelding 3: Bouwblokken (lichtblauw) die geen geluidluwe gevel hebben zoals omschreven in het Amsterdams geluidbeleid

De geluidbelasting tengevolge van de Wiltzanghlaan en op de noord- en oostgevel van het noordelijk gelegen bouwblok overschrijdt de voorkeursgrenswaarde van 48 dB voor wegverkeerslawaai. Er is daarmee geen sprake van een geluidluwe gevel. Tevens overschrijdt de geluidbelasting tengevolge van de Ring A10 West de voorkeursgrenswaarde op de achtste bouwlaag van beide in afbeelding 3 gepresenteerde bouwblokken. Door specifieke toepassing van borstwering zal hier een geluidluwe gevel worden gerealiseerd.

4.8 Cumulatie wegverkeerslawaai, railverkeerslawaai en industrielawaai

Aangezien er voor wegverkeerslawaai, railverkeerslawaai en industrielawaai sprake is van een overschrijding van de voorkeursgrenswaarden die voor de genoemde bronnen van geluid gelden, is de cumulatieve geluidbelasting inzichtelijk gemaakt. In de bijlagen bij het Reken- en meetvoorschrift geluidhinder 2006 is een rekenmethode opgenomen voor de berekening van de cumulatieve geluidbelasting (L_{cum}). De cumulatieve geluidbelasting is bepaald aan de hand van deze bijlage. L_{cum} is hier maximaal 68 dB. Voor gedetailleerde rekenresultaten wordt verwezen naar bijlage 11. Hiermee is de cumulatieve geluidbelasting ($L_{vl_{cum}}$, $L_{rl_{cum}}$, en $L_{il_{cum}}$) niet meer dan 3 dB hoger dan de hoogste van de maximaal toegestane ontheffingswaarden. Deze maximaal toegestane ontheffingswaarde bedraagt 68 dB, de maximaal toelaatbare gecumuleerde waarde bedraagt derhalve 71 dB. Aan dit criterium uit het geluidbeleid van de gemeente Amsterdam is derhalve voldaan.

4.9 Maatregelen aan de ontvanger

Het is niet aannemelijk dat het treffen van bron- en/of overdrachtsmaatregelen, gericht op het terugbrengen van de geluidbelasting tengevolge van de verschillende geluidbronnen, doelmatig is. B & W kan ons inziens derhalve voor genoemd plan overwegen hogere waarden vast te stellen.

Ontvangermaatregelen:

In het kader van de procedure hogere waarde èn gelet op de voorgenomen samenstelling van de uitwendige scheidingsconstructie van de nieuw te realiseren bebouwing dient te worden beoordeeld of met de beoogde (bouw)materialen kan worden voldaan aan de aanvullende eis betreffende het ten hoogst toelaatbare binnenniveau voor de woningen van 33 dB. Voor scholen geldt dat het binnenniveau in theorie lokalen 28 dB mag bedragen en in theorie vaklokalen 33 dB.

Bij de bepaling van de noodzakelijke maatregelen dient te worden voldaan aan de eisen van het Bouwbesluit met betrekking tot de geluidwering van de uitwendige scheidingsconstructie en de ventilatie. Voor de geveldelen waar wegverkeerslawaai de maatgevende geluidbron is, dient bij de bepaling van de geluidwering gerekend te worden met de gecumuleerde geluidbelasting wegverkeerslawaai waarop de aftrek ex artikel 110g Wgh niet is toegepast. Deze geluidbelasting is weergegeven in bijlage 10. Voor de geveldelen waar railverkeerslawaai de maatgevende geluidbron is, dient bij de bepaling van de geluidwering gerekend te worden met de geluidbelasting railverkeerslawaai. Deze geluidbelasting is weergegeven in bijlage 8.

5 Conclusies

Woningstichting Eigen Haard heeft in samenspraak met gemeente Amsterdam Stadsdeel West een uitwerkingsplan gemaakt voor het Middengebied van de Kolenkitbuurt. Het uitwerkingsplan geeft ruimte aan een gevarieerd woningaanbod en aan een brede schoolontwikkeling aan de Bos en Lommerweg.

In verband met de benodigde bestemmingsplanprocedure is een akoestisch onderzoek uitgevoerd om vast te stellen wat de geluidsbelasting bedraagt vanwege ingevolge de Wet geluidhinder gezoneerde geluidsbronnen, te weten omliggende (spoor)wegen en het industrieterrein Westpoort.

Tegelijk is bepaald of wordt voldaan aan de grenswaarden ingevolge de Wet geluidhinder en het geluidbeleid van de gemeente Amsterdam.

Uit de onderzoeksresultaten blijkt het volgende:

- door zowel geluid vanwege omliggende (spoor)wegen als door geluid van het industrieterrein Westpoort is sprake van een geluidsbelasting op geprojecteerde geluidsgevoelige bestemmingen binnen het plan Kolenkitbuurt, die hoger is dan de voorkeurgrenswaarde ingevolge de Wet geluidhinder;
- de maximale ontheffingswaarde wordt op geen van de geprojecteerde geluidsgevoelige bestemmingen overschreden;
- er wordt, behoudens de in afbeelding 3 paragraaf 4.7 weergegeven bouwblokken, voldaan aan de aanvullende geluidsvereisten die volgen uit het geluidbeleid van de gemeente Amsterdam, te weten:
 - de aanwezigheid van minimaal 1 geluidluwe gevel;
 - de gecumuleerde geluidsbelasting is niet hoger dan 71 dB (= hoogste maximale ontheffingswaarde + 3 dB);
- het treffen van maatregelen om de geluidsbelasting tot de voorgrenswaarde ingevolge de Wet geluidhinder terug te brengen stuiten naar verwachting op bezwaren van financiële, landschappelijk en/ of verkeerskundige aard;
- Burgemeester en wethouders kunnen, gezien het bovenstaande, overwegen om de volgende hogere waarden toe staan van ten hoogste:
 - 63 dB vanwege verkeer op de Bos en Lommerweg;
 - 52 dB vanwege verkeer op de Leeuwendalersweg;
 - 59 dB vanwege verkeer op de Wiltzanghstraat;
 - 57 dB vanwege verkeer op de Akbarstraat;
 - 51 dB vanwege verkeer op de Ring A10;
 - 68 dB vanwege rail- en metroverkeer op het ten westen gelegen spoor (traject 385 en 490);
 - 52 dB vanwege industrieterrein Westpoort.
- voor 2 bouwblokken langs het spoor, zoals weergegeven in afbeelding 3 paragraaf 4.7, zal door middel van specifieke toepassing van borstwering een geluidluwe gevel worden gecreëerd. Voor alle overige blokken is sprake van een geluidluwe gevel.
