Bijlagen

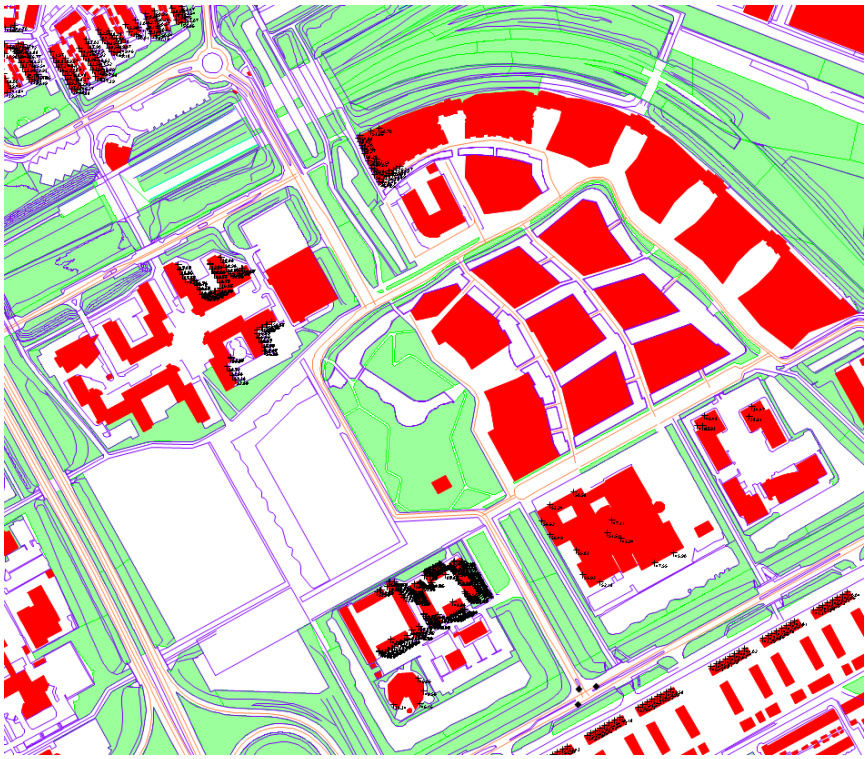

- Omgevingsvergunning Bergwijkpark te Diemen: Onderzoek naar de optredende geluidbelasting vanwege industrieterrein Verrijn Stuart, rapportnummer Peutz O 15481-1-RA d.d. 6 november 2014 (concept).

2 Inleiding

Met het vaststellen van het bestemmingsplan Bergwijkpark 2015 wordt de reconstructie van de Bergwijkdreef toegelaten. De verhoogde ligging tussen de Daalwijkdreef en de Dalsteindreef wordt opgeheven en het middelste wegvak wordt in de zuidwestelijke richting verplaatst.

Figuur 1: huidige situatie

Figuur 2 Situatie 2025

In de reconstructiezone om de Bergwijkdreef zijn een groot aantal woningen en andere geluidgevoelige gebouwen aanwezig. Voor de woningen en andere geluidgevoelige gebouwen ter hoogte van de fysieke reconstructie gelden grenswaarden op grond van de Wet geluidhinder. De grenswaarden hebben betrekking op de geluidbelasting van de gevel en de geluidbelasting binnen. De grenswaarden zijn afhankelijk van de vraag of de weg en de gebouwen op 1 januari 2007 bestonden of waren toegelaten, of er eerder een hogere grenswaarde is vastgesteld en wat de heersende geluidbelasting is[1].

Met het onderzoek is daarom onderzocht wat de heersende geluidbelasting is[2] en de geluidbelasting in het maatgevende jaar na de reconstructie. Met behulp van de heersende geluidbelasting kan worden nagegaan wat de grenswaarde is[3]. Indien de geluidbelasting met afgerond 2 dB[4] of meer toeneemt ten opzichte van de grenswaarde is sprake van een reconstructie in de zin van de Wet geluidhinder.

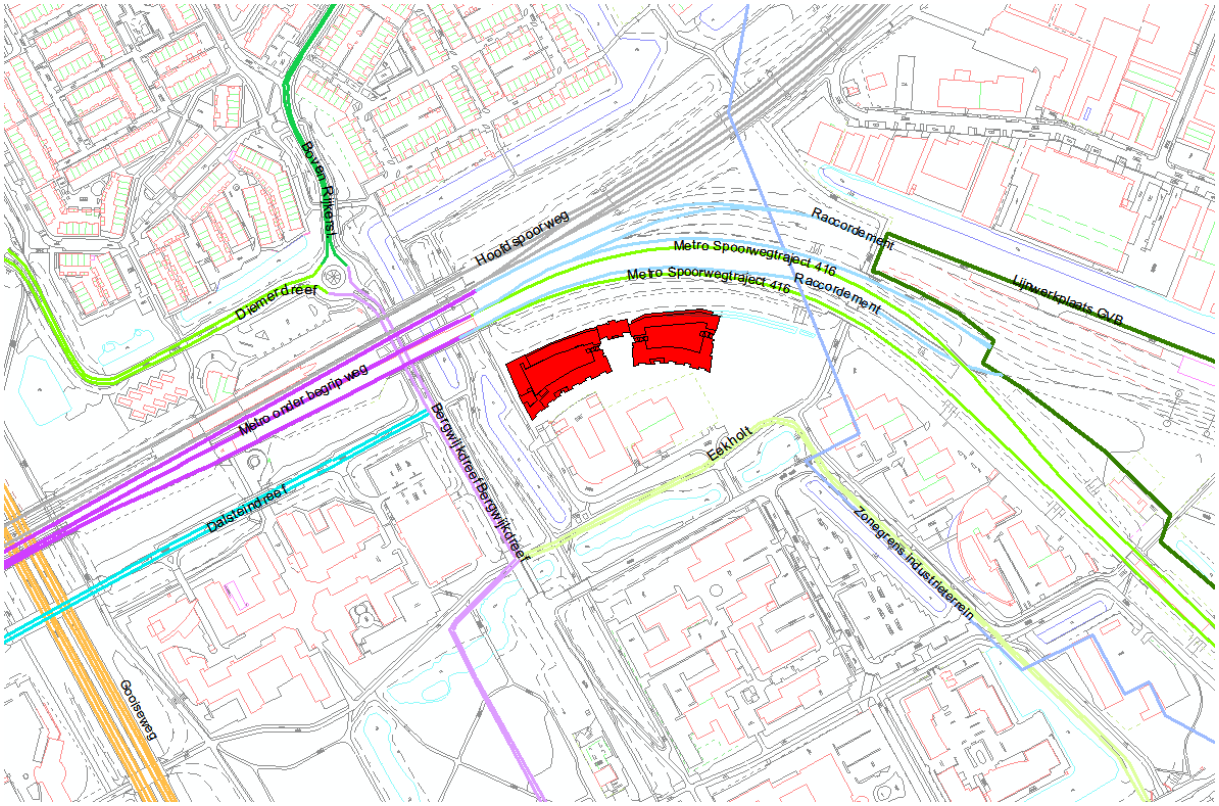

Indien de reconstructiegrenswaarde wordt overschreden dienen de in aanmerking komende afstand-, bron- en schermmaatregelen te worden onderzocht, die helpen om aan de grenswaarde te voldoen[5].
Indien maatregelen doeltreffend zijn – de geluidbelasting wordt teruggebracht tot de grenswaarde - voldoet het ruimtelijk plan aan de grenswaarde van de Wet geluidhinder. De in aanmerking komende maatregelen kunnen ook onvoldoende doeltreffend zijn of overwegende bezwaren ontmoeten van stedenbouwkundige, verkeerskundige, vervoerskundige, landschappelijke of financiële aard. In dat geval dienen de maatregelen in kaart te worden gebracht die niet stuiten. Deze maatregelen met de bijbehorende te hoge geluidbelasting worden op grond van artikel 100a van de Wet geluidhinder vastgesteld met

[1] Artikel 100 Wet geluidhinder
[2] Artikel 77, derde lid Wet geluidhinder
[3] Artikel 100 Wet geluidhinder
[4] Artikel 1.3 Reken en meetvoorschrift geluid 2012
[5] Artikel 77, tweede lid Wet geluidhinder

een hogere grenswaarde besluit. De vastgestelde hogere grenswaarde treedt in de plaats van de grenswaarde van de Wet geluidhinder. Op grond van artikel 112 en 113 van de Wet geluidhinder treffen burgemeester en wethouders met betrekking tot de geluidwering van de gevels maatregelen waarmee de geluidbelasting binnen in de woning of een andere geluidgevoelig gebouw met een hogere grenswaarde wordt begrensd tot de binnengrenswaarde van de Wet geluidhinder.

Tot de reconstructie van de Bergwijkdreef wordt niet overgegaan, anders dan in overeenstemming met het bestemmingsplan Bergwijkpark 2015[6]. Met het bestemmingsplan worden dan ook de hogere waarde vastgesteld met de bijbehorende geluidbeperkende maatregelen aan de weg, in de overdrachtssfeer en/of aan de gevel.
De hogere grenswaarde mag overigens niet hoger worden vastgestelde dan op grond van artikel 100a van de Wet geluidhinder is toegelaten. Indien het gestelde maximum wordt overschreden kan de reconstructie niet worden toegelaten.

Een hogere grenswaarde mag niet worden vastgesteld indien de samenloop van geluidsbelastingen boven de grenswaarde vanwege meer dan één geluidbron leidt tot een onaanvaardbare geluidbelasting. In dat geval dient de initiatiefnemer extra maatregelen te treffen waarmee een onaanvaardbare geluidbelasting[7] wordt voorkomen. Met het akoestisch onderzoek worden daarom tevens de geluidbelasting vanwege het raccordement (GVB werkplaats – metrospoorweg), de wegen en de spoorwegen in kaart gebracht.

Figuur 3 verbeelding van het raccordement, de 50 km per uur wegen en de spoorwegen

[6] Artikel 99, tweede lid Wet geluidhinder

[7] Het plangebied maakt geen deel uit van een met het oog op de geluidsbelasting vastgesteld beperkingengebied om Schiphol. De samenloop behoeft op grond van de Wet geluidhinder dan niet met inbegrip van vliegverkeerslawaai te worden getoetst. Uit oogmerk van de goede ruimtelijke ordening wordt vliegverkeerslawaai echter wel meegenomen in deze toets.

De gemeente is niet verplicht om een hogere grenswaarde vast te stellen. De gemeente stelt een hogere grenswaarde vast indien het hogere grenswaarde beleid in acht wordt genomen. Er kunnen overigens gegronde reden bestaan om van een of meer onderdelen van dit beleid vrijstelling te verlenen.

Een toename van 2 dB of meer van de geluidbelasting de reconstructiezone vanwege de Bergwijkdreef of de wegvakken die aansluiten op de Bergwijkdreef dient eveneens met het akoestisch onderzoek in kaart te worden gebracht[8]. Voor deze objecten stelt de Wet geluidhinder echter geen reconstructiegrenswaarde. Een hogere grenswaarde met geluidbeperkende maatregelen worden op grond van de Wet geluidhinder niet verlangd en kunnen ook niet worden vastgesteld.

Verder moet voldaan worden aan het criterium van de goede ruimtelijke ordening (GRO). Dat wil zeggen dat geluidbronnen waar op de Wet geluidhinder niet van toepassing is, worden onderzocht en getoetst als ware het Wet geluidhinder bronnen. In dit geval gaat het om industrielawaai, vliegverkeerslawaai en de geluidbelasting vanwege de (toekomstige) wegen zonder zone (30 km/uur weg, woonerf). Voor deze bronnen gelden de afwegingscriteria van de Wet ruimtelijke ordening die ruimer zijn dan de Wet geluidhinder. Van de toekomstige 30 km uur wegen zijn de intensiteiten nog niet berekend. De 30 km per uur wegen zullen wel in het definitieve onderzoekrapport worden opgenomen.

3 Dosismaten geluidbelasting

Indien de geluidbelasting en grenswaarde wordt uitgedrukt in de dosismaat dB, dan gaat het om de Europese dosismaat L_{den}.

- L_{den} is de op een geheel getal af te ronden geluidsbelasting op een plaats en vanwege een bron over alle perioden van 07.00–19.00 uur, van 19.00–23.00 uur en van 23.00–07.00 uur van een jaar. Hierbij staat het acroniem $_{den}$ voor **d**ay, **e**vening en **n**ight.
- L_{day} is de op een geheel getal af te ronden geluidsbelasting op een plaats en vanwege een bron de periode van 07.00–19.00 uur van een jaar,
- $L_{evening}$ is de op een geheel getal af te ronden geluidsbelasting op een plaats en vanwege een bron de periode van 19.00–23.00 uur van een jaar
- L_{night} is de op een geheel getal af te ronden geluidsbelasting op een plaats en vanwege een bron de periode van 23.00–07.00 uur van een jaar

Het verband tussen L_{den} enerzijds en de L_{day}, $L_{evening}$ en L_{night} anderzijds wordt gegeven met de formule:

$$L_{den} = 10 * \log (12*10^{(Lday/10)} + 4*10^{((Levening+5)/10)} + 8*10^{((Lnight+10)/10)})/24)$$

De geluidbelasting vanwege een industrieterrein wordt uitgedrukt in de dosismaat dB(A). De geluidbelasting vanwege een industrieterrein is de etmaalwaarde van het equivalente geluidsniveau, de hoogste van de volgende drie waarden:

- de waarde van het equivalente geluidsniveau in dB(A) over de periode 07.00–19.00 uur (dag);
- de met 5 dB(A) verhoogde waarde van het equivalente geluidsniveau in dB(A) over de periode 19.00–23.00 uur (avond);
- de met 10 dB(A) verhoogde waarde van het equivalente geluidsniveau in dB(A) over de periode 23.00–07.00 uur (nacht).

[8] Artikel 77, tweede lid en artikel 99 tweede lid Wet geluidhinder

4 Aftrek van de berekende of gemeten waarde wegverkeerslawaai

Op grond van artikel 110g van de Wet geluidhinder moet de berekende of gemeten geluidbelasting vanwege een weg worden gecorrigeerd voordat de geluidbelasting kan worden getoetst aan de grenswaarde.

De correctie wordt toegepast in de veronderstelling dat de geluidbelasting gaat afnemen door het stiller worden van het verkeer (het motor- en bandgeluid en de aerodynamische geluidproductie). Met welke waarde de berekende of gemeten geluidbelasting dient te worden verminderd is bepaald met artikel 3.4 van het Reken- en meetvoorschrift geluid 2012 (RMG 2012).

De toe te passen aftrek op de geluidsbelasting vanwege een weg, van de gevel van woningen of van andere geluidsgevoelige gebouwen of aan de grens van geluidsgevoelige terreinen bedraagt tot 1 juli 2018:

a) 3 dB voor wegen waarvoor de representatief te achten snelheid van lichte motorvoertuigen 70 km/uur of meer bedraagt en de geluidsbelasting vanwege de weg zonder toepassing van artikel 110g van de Wet geluidhinder 56 dB is;
b) 4 dB voor wegen waarvoor de representatief te achten snelheid van lichte motorvoertuigen 70 km/uur of meer bedraagt en de geluidsbelasting vanwege de weg zonder toepassing van artikel 110g van de Wet geluidhinder 57 dB is;
c) 2 dB voor wegen waarvoor de representatief te achten snelheid van lichte motorvoertuigen 70 km/uur of meer bedraagt en de geluidsbelasting afwijkt van de onder a en b genoemde waarden;
d) 5 dB voor de overige wegen (alle overige wegen in dit geval ook de metrospoorweg parallel aan de hoofdspoorweg en het raccordement);
e) 0 dB bij het bepalen van de karakteristieke geluidwering van de gevel of dove gevel (bij het toepassen van de artikelen 3.2 en 3.3 van het Bouwbesluit 2012 en bij toepassing van de artikelen 111b, tweede en derde lid, 112 en 113 van de Wet geluidhinder).

De toe te passen aftrek op de geluidsbelasting vanwege een weg, van de gevel van woningen of van andere geluidsgevoelige gebouwen of aan de grens van geluidsgevoelige terreinen bedraagt met ingang van 1 juli 2018:

a. 2 dB voor wegen waarvoor de representatief te achten snelheid van lichte motorvoertuigen 70 km/uur of meer bedraagt;
b. 5 dB voor de overige wegen;
c. 0 dB bij het bepalen van de karakteristieke geluidwering van de gevel of dove gevel (bij het toepassen van de artikelen 3.2 en 3.3 van het Bouwbesluit 2012 en bij toepassing van de artikelen 111b, tweede en derde lid, 112 en 113 van de Wet geluidhinder).

De aftrek voor de Gooisweg bedraagt 2 dB en voor de Diemerdreef, Bergwijkdreef, Dalsteindreef, Daalwijkdreef, Boven Rijkersloot en Eekholt 5 dB.

5 Maatgevende verkeersintensiteit weg- en railverkeerlawaai

De reconstructie grenswaarde heeft betrekking op het maatgevende jaar (RMVG 2012), waarmee wordt gedoeld op het jaar met de hoogste (representatieve) verkeersintensiteit. In de gevallen waarin zich geen bijzondere omstandigheden voordoen wordt als maatgevende jaar vaak aangehouden het tiende (tot twintigste) jaar na openstelling of reconstructie van de weg of, in bestaande situaties.
Bij bijzondere omstandigheden zoals een over decennia gefaseerd ontwikkelingsplan, dat verkeer genereert op de te beoordelen weg, gaat het natuurlijk om de verkeerintensiteit in de eindsituatie met de hoogte representatief geachte verkeersintensiteit.

Voor de metro is uitgegaan van dienstjaar 2014 vermeerderd met een toeslag van 1,5 dB.

Voor de hoofdwegen en hoofdspoorwegen dient te worden uitgegaan van de verkeersintensiteit die is opgenomen in het geluidregister.

6 Zone reconstructie

De zone van een (spoor)weg wordt gemeten vanaf de buitenste begrenzing van de buitenste rijstrook of buitenste spoorstaaf. Aan het einde van de weg loopt de zone door over een lengte die gelijk is aan die breedte en behoudt daarbij de zonebreedte aan het wegeinde[9].

De breedte van de zone wordt bepaald door de vraag of sprake is van stedelijk of buitenstedelijk gebied en door het aantal rijstroken of sporen van een (spoor)weg. Waar de zone overgaat in een minder brede zone loopt de breedste zone door over een lengte van 1/3 van zijn breedte[10]. Bij het reconstructie onderzoek is uitgegaan van de wegzone in de huidige en in de toekomstige situatie.

Opgemerkt moet worden dat op grond van artikel 1 van de Wet geluidhinder een weefvak of voorsorteerstrook bij het bepalen van de zonebreedte meetelt als normale rijstrook. Een rijstrook is immers gedefinieerd als een strook van de rijbaan van een weg, welke voldoende plaats biedt aan een enkele rij rijdende motorvoertuigen op meer dan drie wielen, of, indien door middel van markering een bredere strook als rijstrook is aangegeven, die strook.

De Bergwijkdreef is een weg in stedelijk gebied met een maximum snelheid van 50 km per uur. De weg bestaat uit 2 en 3 rijstroken en heeft aan weerszijden een zone van 350 m[11] doordat de overgangen van 3 naar 2 rijstroken dichter bij elkaar liggen dan de overgangslengte. Bij het onderzoek is uitgegaan van de weg in de toekomstige situatie

Figuur 4: Zone Bergwijkdreef, achtereenvolgend in de huidige en in de gereconstrueerde situatie

De reconstructiebepalingen gelden niet voor de gehele zone maar alleen voor de gevoelige objecten ter hoogte van het te reconstrueren wegvak. Dat wegvak is gelegen tussen de Dalsteindreef en de Daalwijkdreef. Om te voorkomen dat gevoelige objecten buiten de reconstructieregeling vallen wordt de reconstructiezone aan het eind en begin van de reconstructie verlengd met 1/3 van de zone breedte (voor de Bergwijkdreef met afgerond 117 meter).

[9] Artikel 75, derde lid Wet geluidhinder en Besluit geluidhinder artikel 1.4a. derde lid
[10] Artikel 75 tweede lid Wet geluidhinder en Besluit geluidhinder artikel 1.4a tweede lid
[11] Artikel 74,1.a.1 Wgh

.

Figuur 5 Zonen reconstructie

De reconstructiebepalingen zijn van toepassing op de woningen en andere geluidgevoelige gebouwen binnen deze zone.

7 Geluidgevoelige objecten

Met ingang van 1 juli 2012 zijn de volgende bestemmingen aangewezen als geluidgevoelig object.

1. Een gebouw dat voor bewoning gebruikt wordt of daartoe bestemd is (hierna woning)[12].
2. Een 'ander' geluidgevoelig gebouw, te weten een onderwijsgebouw[13], ziekenhuis, verpleeghuis, verzorgingstehuis, psychiatrische inrichting of een kinderdagverblijf (artikel 1.2, eerste lid van het Besluit geluidhinder).
3. Een geluidgevoelig terrein: een standplaats, bestemd voor een woonwagen (artikel 1, eerste lid onder e van de Huisvestingswet en artikel 1.2, derde lid Besluit geluidhinder) of een ligplaats in het water, bestemd voor het wonen in een schip (artikel 1.2, derde lid Besluit geluidhinder).

De Wet geluidhinder is niet van toepassing op een gebouwdeel van een 'ander' geluidgevoelig gebouw (2) met een niet geluidgevoelige bestemming (artikel 1.2, tweede lid Besluit geluidhinder). Indien het ruimtelijk plan geen onderscheid maakt tussen geluidgevoelige en niet geluidgevoelige gebouwdelen dient de Wet geluidhinder te worden toegepast op het gehele gebouw/bebouwingsvlak. Met artikel 1.1, eerste lid onder d van het Besluit geluidhinder zijn de volgende gebouwdelen aangewezen als geluidgevoelig: (d.1) leslokalen en theorielokalen van onderwijsgebouwen; (d.2) onderzoeks- en behandelingsruimten van ziekenhuizen en verpleeghuizen, (d.3) onderzoeks-, behandelings-

[12] De volgende gebouwen worden niet aangemerkt woning en zijn daarom geen geluidgevoelig object: een penitentiaire inrichting, een justitiële jeugdinrichting of een inrichting voor verpleging van ter beschikking gesteld (artikel 1.3 Besluit geluidhinder)

[13] Gebouw bestemd voor primair onderwijs, voortgezet onderwijs, speciaal onderwijs, particulier onderwijs, beroepsonderwijs, volwasseneneducatie of hoger onderwijs of universitair onderwijs (toelichting op de wijziging van 1 juli 2012 van het Besluit geluidhinder)

, recreatie- en conversatieruimten, alsmede woon- en slaapruimten van verzorgingshuizen, psychiatrische inrichtingen en kinderdagverblijven; (d.4) theorievaklokalen van onderwijsgebouwen en (d.5) ruimten voor patiëntenhuisvesting, alsmede recreatie- en conversatieruimten van ziekenhuizen en verpleeghuizen.

Ten aanzien van een onderwijsgebouw of kinderdagverblijf wordt de geluidbelasting over de periode 19.00–23.00 uur (avond) of de periode 23.00–07.00 uur (nacht) buiten beschouwing gelaten, indien dat gebouw in de avondperiode of in de nachtperiode niet als kinderdagverblijf of onderwijsgebouw wordt gebruikt (artikel 1.6 Besluit geluidhinder op grond van artikel 1b, eerste lid van de Wet geluidhinder).

8 Grenswaarde en de daarop afgestemde rapportage

De grenswaarde bij een reconstructie volgt uit artikel 100 van de Wet geluidhinder (woningen) en artikel 3.3 van het besluit Besluit geluidhinder (Bg, andere geluidgevoelige gebouwen).

De grenswaarde bedraagt 48 dB met de volgende uitzonderingen.

- Als eerder een hogere waarde is vastgesteld is de grenswaarde laagste van de volgende twee waarden: de heersende waarde en de eerder vastgestelde hogere grenswaarde (art. 100.2 Wgh en 3.3.2 Bg);
- Als de weg en de woningen of andere geluidgevoelige gebouwen op 1 januari 2007 aanwezig of geprojecteerd waren en er eerder geen hogere waarde is vastgesteld is de grenswaarde de heersende waarde (art. 100.3 Wgh en 3.3.3 BG).

9 Geluidmodel

9.1 Geometrie en bodemdemping

Het geluidonderzoek is uitgevoerd met een geluidberekeningsmodel (of delen daarvan) dat is vervaardigd met behulp van de GBKN (Grootschalige Basis Kaart van Nederland) en het Actueel Hoogtebestand Nederland (AHN2). Het gaat om de plaats en hoogte van de bodem (hoogtelijnen), de gebouwen, de kunstwerken, de bodemreflectie en -absorptiegebieden etc. De hoogte van de oppervlaktewateren zijn gebaseerd op de peilbesluiten van de waterkwantiteit beheerder. Om te voorkomen dat een hoogtelijn van een kade en het waterpeil op elkaar liggen is de waterlijn 0,2 m naar binnen verplaatst.

Verder bevat het model de bestaande geluidschermen langs de Gooiseweg.
Voor het modeleren van de nieuwbouw zijn de cad-tekeningen bij de aanvraag om een omgevingsvergunning gebruikt en de aan het Snippeplan aangepaste tekening van het masterplan. De hoogte ter plaatse van het plangebied is gesteld op NAP -1,1 m. De Bergwijkdreef loopt met een constante hellingshoek vanaf de kruising met de Dalsteindreef op NAP 0,3 m af naar het toekomstige maaiveld niveau -1,1 m.

Voor de hoofdspoorweg zijn de geometrische gegevens uit het Geluidregister Spoor in het geluidmodel ingelezen (versie januari 2015). Conform rekenvoorschrift zijn de gegevens aangevuld door onder het hart van elke spoor een afschermende bodemlijn te plaatsen die 0,2 m lager is dan de boven kant van de spoorstaaf (BKS) en op 4,5 meter uit de spoor een taludlijn die 0,5 m lager is. Voor de bodemhoogte ter van metro en hoofdspoorweg zijn isohoogtelijnen uit het AHN2 in het geluidmodel opgenomen[14].

Er zijn 4 modellen vervaardigd, te weten een voor de hoofdspoorweg, een voor het wegverkeerslawaai, een voor het metroverkeerslawaai en een voor het raccordementlawaai. Kunstwerkranden, absorptievakken, geluidschermen en reflectievlakken die de geluidbelasting vanwege het ene brontype wel maar het andere niet beïnvloeden diende immers per brontype in het te worden opgenomen of te worden weggelaten.

Woon- en bedrijfspercelen, pleinen, wegen, paden en oppervlaktewateren, etc. zijn als 100

[14] De hoogte van de metrospoorlijn is bepaald uit het AHN2 n de bovenbouw met behulp van luchtfoto's en visueel onderzoek. Dit in afwachting van een opgave van de bronhouder, de Dienst Metro.

% reflecterend in het model opgenomen.
De daktuinen (parkeergarages) van blok 1 en blok 2 zijn gemodelleerd als 50 % reflecterend.

Bij het raccordement is gerekend met de ter plaatse van de sporen van de lijnwerkplaats gemeten bronsterke van de metro, sneltram en diesellocomotieven die niet is gecorrigeerd voor bodemdemping ed. Bij de geluidberekening is daarom uitgegaan van een bodemabsorptie van 0 %.

9.2 Wegdekverharding

Voor de 50 km per uur wegen is uitgegaan van DAB. Vanwege het geluidbeleid van de gemeente zal te zijner tijd op alle deze wegen sma-nl5 (CROW publiocatie 316) worden toegepast. De verharding van 30 km per uur wegen bestaat meestal uit klinkers in keperverband.

9.3 Bovenbouw spoorwegen

Voor de hoofdspoorwegen is bovenbouw uit het Geluidregister Spoorwegen in het geluidmodel opgenomen.
Voor de metro is in afwachting van de opgave van de Dienst Metro de bovenbouw met lucht foto's bepaald, en is een spoorstaaf onderbreking ingevoerd op die plaatse waar dat blijkt uit de geluidproductie van een passerende metro.

Conform het Tracé Besluit OV SAAL zijn de doorgaande sporen voorzien van betonnen dwarsliggers met buiten de wissel raildempers. Tussen de doorgaande sporen ligt een spoor met houtendwarsliggers zonder raildempers dat niet in gebruik (maximaal incidenteel). Bij een herziening van het Geluidregister Spoor heeft ProRail ten onrechte 1/3 van het verkeer toebedeeld aan dat spoor met houten dwarsliggers. Hierdoor wordt ter plaatse van het bouwplan een circa 1 dB te hoge geluidbelasting berekend. Met het Geluidregister Spoor wordt meer geluidruimte geclaimd dan op grond van het TB OV SAAL is toegestaan.

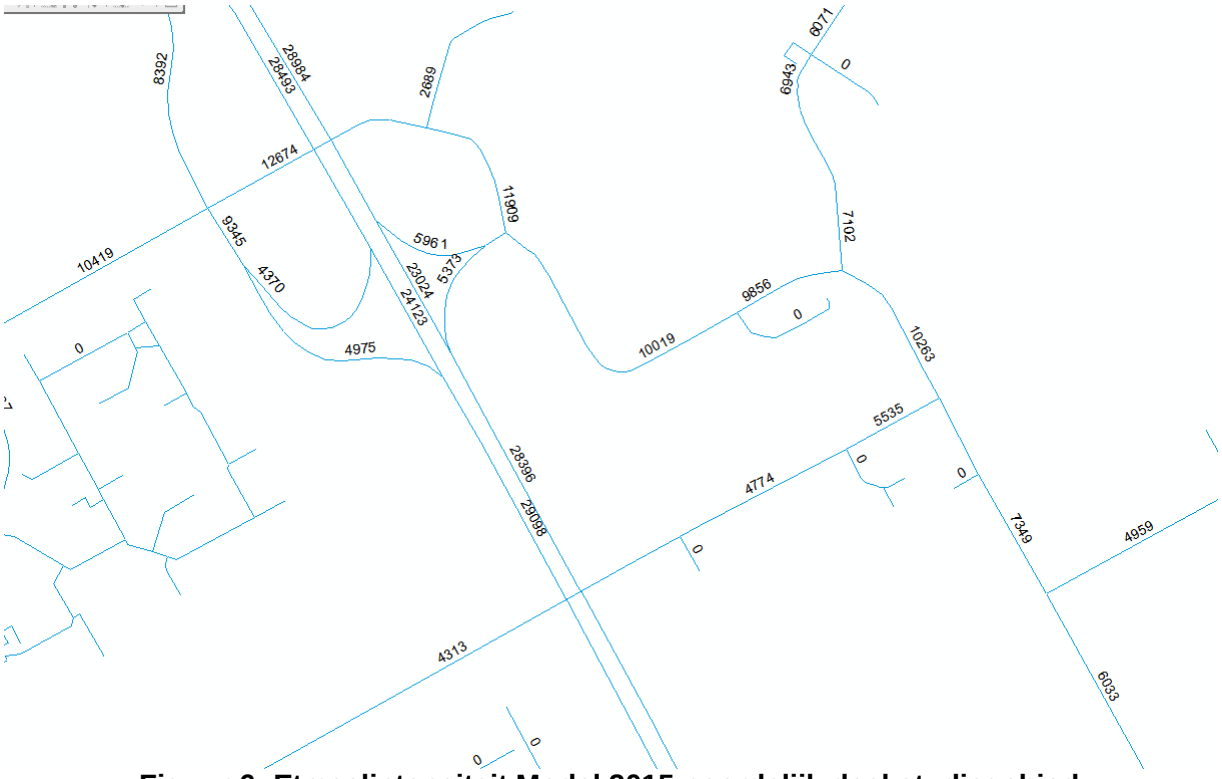

9.4 Verkeersintensiteit

9.4.1 Wegen

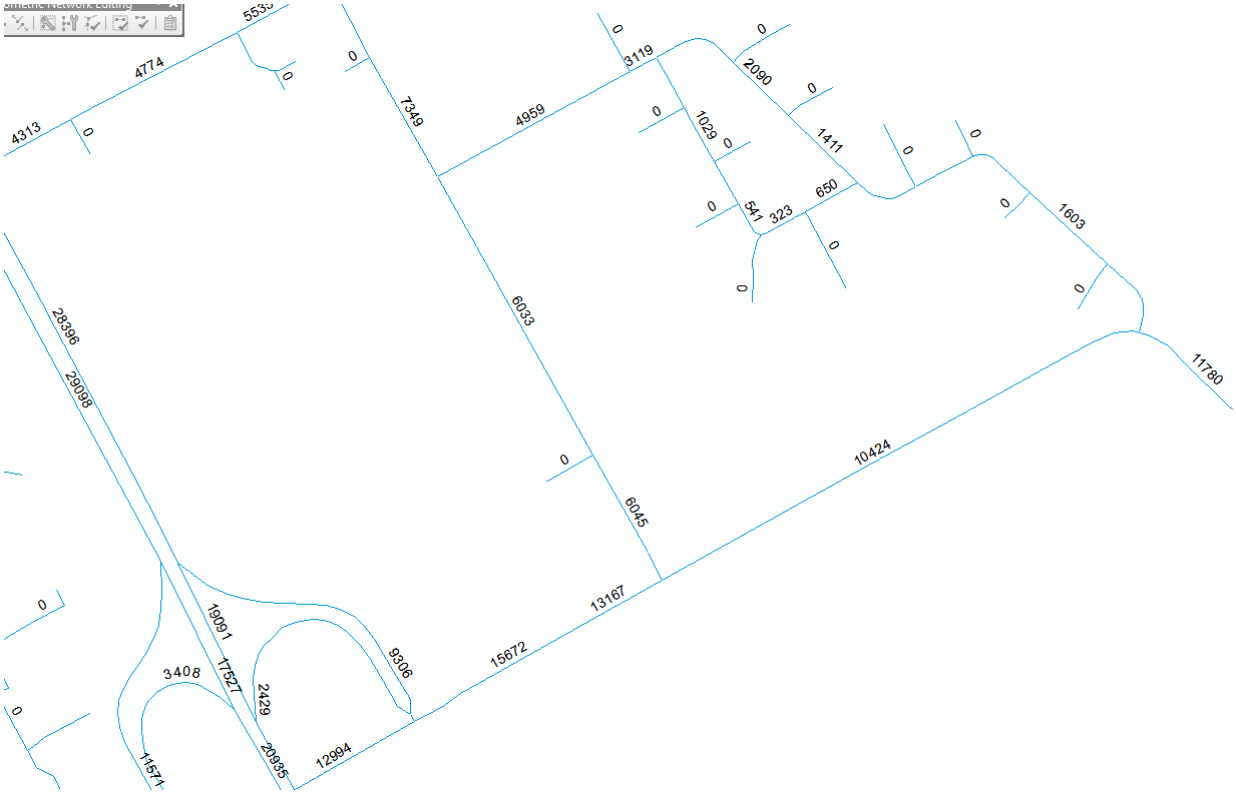

In het geluidmodel zijn de verkeersintensiteiten ingevoerd van het model 2015 en van het hoofdalternatief 2030.

Het gaat om de verkeerprognose, vervaardigd met het verkeersmodel van Diemen (G&C). het verkeersmodel van Diemen is het regionale model (VENOM), aangevuld met verfijning voor de locatie Diemen. Uitgangspunt is verder de herontwikkeling van Bergwijkpark conform het masterplan dat is aangepast aan het Snippeplan. Berekend is prognosejaar 2030. Het jaar 2025 is vanwege de geringe toename gelijkgesteld aan de 2030.

Op basis van verkeerstelingen (verkeersmonitor) is de onderverdeling over de etmaalperioden en voertuigcategorieën bepaald. De Gooisweg (S112) valt buiten de monitoring omdat de gemeente Amsterdam de wegbeheerder is. Voor de Gooiseweg is daarom de verdeling op de S113 (Muiderstraatweg-Provincialeweg met vergelijkbare transportfunctie) als uitgangspunt genomen.

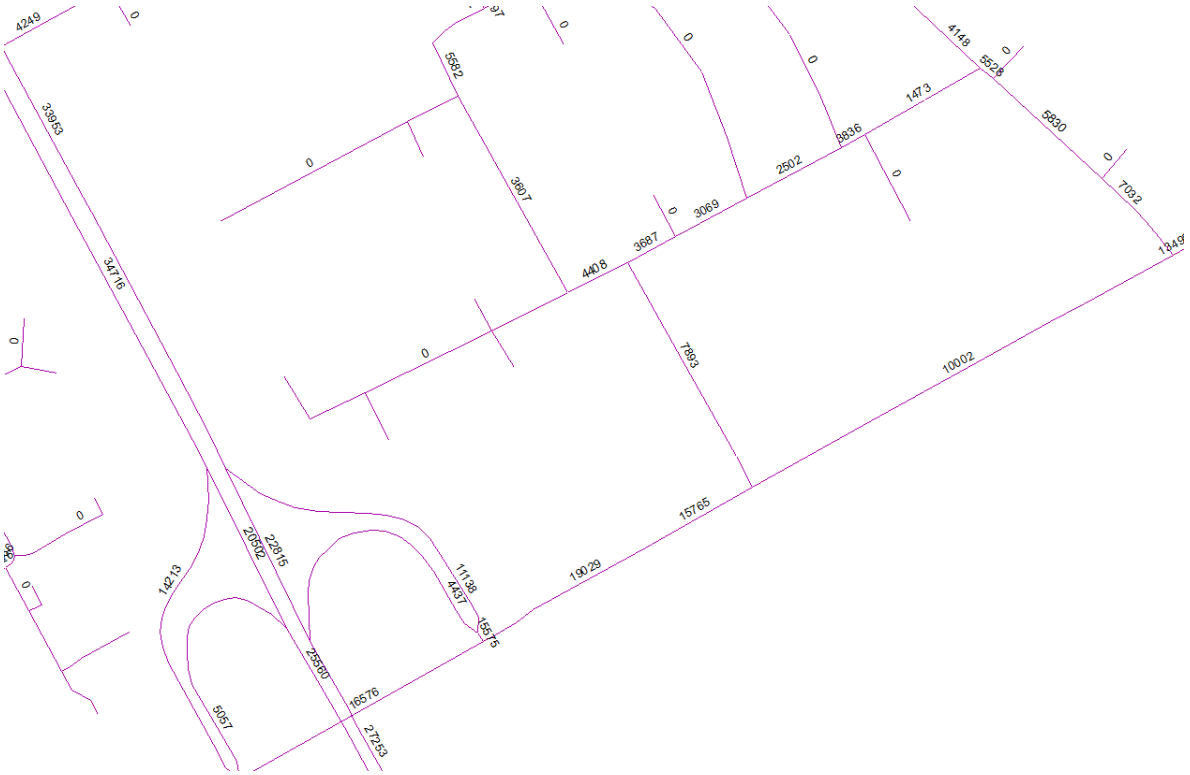

Figuur 6: Etmaalintensiteit Model 2015 noordelijk deel studiegebied

Figuur 7 Etmaalintensiteit Model 2015 zuidelijk deel studiegebied

Figuur 8 Etmaalintensiteit hoofdalternatief 2030 noordelijk deel studiegebied

Figuur 9 Etmaalintensiteit hoofdalternatief 2030 zuidelijk deel studiegebied

De wegen zijn in het geluidmodel geschematiseerd tot 2 rijstroken met elk 50 % van de verkeersintensiteit.
De Gooiseweg is per rijrichting geschematiseerd met een weefvak met 10 % van de verkeersintensiteit, de middelste rijstrook met 50% en rijstrook langs de middenberm met 40

% van de verkeersintensiteit. Waar het verkeer zich gelijkmatig verdeeld bij de aansluiting op rijksweg A10 is de etmaalintensiteit gedeeld door het aantal rijstroken, Waar in de rijrichting maar 2 rijstroken aanwezig zijn is gerekend met 60% op de rechter rijstrook en 40 % op de linker rijstrook.

De etmaalintensiteit is verdeeld over de dag- (7:00 – 19:00 uur), avond- (19:00 – 23:00 uur) en nachtperiode (23:00 – 7:00 uur). Volgens het MRV 2012 moet de geluidberekening worden uitgevoerd met de uur - gemiddelde - waarde van de periode, dus het gemiddelde dag uur (GDU), het gemiddelde avonduur (GAU) en het gemiddelde nacht uur (GNU). Verder moet de onderverdeling bekend zijn over de categorieën lichte voertuigen (LV), middelzwaar vrachtverkeer (MZ) en zwaar vracht verkeer (ZV)[15]. De verdeling van de etmaalintensiteit en verdere onderverdeling over de categorieën voertuigen is gebaseerd op verkeertellingen van de verkeermonitor van Diemen en geldt voor de huidige en toekomstige situatie.

Het GDU, GAU en GNU als percentage van de etmaalintensiteit en de onderverdeling als percentage van het GU is als volgt.

Weg	*Uurgemid-delde periode waarde*	*GU in %* etmaal-intensiteit	*Lichte voertuigen in % GU*	*Middelzware voertuigen in % GU*	*Zware voertuigen in % GU*
Bergwijkdreef	GDU	6.58	95.17	3.55	1.28
	GAU	3.8	96.76	2.7	0.54
	GNU	0.73	92.36	7.18	0.46
Diemerdreef	GDU	6.78	96.84	2.39	0.77
	GAU	3.32	98.24	1.52	0.24
	GNU	0.67	96.05	3.26	0.69
Eekholt	GDU	7.46	97.22	1.74	1.04
	GAU	1.64	98.03	1.82	0.15
	GNU	0.49	94.53	5.22	0.25
Gooiseweg	GDU	6.73	94.71	3.06	2.23
	GAU	3.15	97.71	1.54	0.75
	GNU	0.83	93.99	4.21	1.8

	GAU	3.24	99.68	0.17	0.15

9.4.2 Raccordement

De gegevens zijn beschikbaar gesteld door het GVB. De intensiteit per etmaalperiode op het raccordement is al volgt.

Type	Dag 7:00-19:00 uur	Avond 19:00-23:00 uur	Nacht 23:00 – 7:00 uur
Diesellocomotief	6	0	2
Metro	16	4	4
Sneltram	8	2	2

De intensiteit diesellocomotieven wordt door het GVB voor 100% toebedeeld aan het zuid spoor (werkplaats in). De metro- en sneltram intensiteiten zijn voor 100 % toebedeeld aan het noord spoor (werkplaats uit).

9.4.3 Metro

In afwachting van een opgave van de afdeling Metro en Tram van de gemeente Amsterdam is uitgegaan van de dienstregeling 2014, vermeerderd met een prognosetoeslag van 1,5 dB (41,3 %) om een mogelijke toename van het metroverkeer in de toekomst te verdisconteren.

Dienstregeling Diemen -Gaasperplas in aantal treinen			
2014 station Diemen zuid	Nacht	Dag	Avond
Richting Gaasperplas	16	85	24
Richting Centraal Station	15	84	24
Totaal	31	169	48

Gehanteerd is verder het uitgangspunt dat elke trein bestaat uit 6 bakken (M5 type). In 2014 bestond de dienstregeling in werkelijkheid uit treinen met 6 en 4 (en 2 bakken) zodat dit

uitgangspunt een overschatting is. Het metro- en sneltrammaterieel valt onder categorie 7 van het RMV 2012.

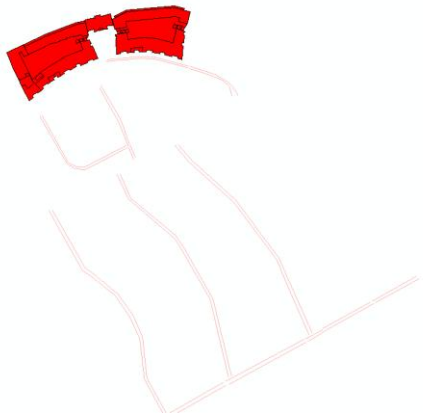

De geluidbelasting vanwege de metro is dus berekend met de volgende verkeersintensiteit

Aantal rekeneenheden dienstregeling 2014 uitgaande van 6 bakken per trein, een prognosetoeslag van 1,5 dB en 4 bakken per rekeneenheid			
	GNU in rekeneenheden per uur	GDU in rekeneenheden per uur	GAU in rekeneenheden per uur
Naar Centraal Station	4.0	14.8	12.7
Naar Gaasperplas	4.2	15.0	12.7

10 Bronnen goede ruimtelijke ordening (Wet ruimtelijke ordening)

In het kader van de GRO dient de geluidbelasting te worden onderzocht van de bronnen de Wet geluidhinder niet van toepassing is, te weten van de wegen die geen zone hebben, het industrielawaai buiten de zone om het industrieterrein en het vliegverkeerslawaai.

Woonerf of 30 km per uur weg

Figuur 10: Toekomstige woonerf of 30 km per uur weg

Een weg in een als woonerf aangeduid gebied of waar een maximum snelheid van 30 km per uur heerst, heeft geen zone[16]. De geluidbelasting vanwege deze nog aan te leggen wegen waarvoor het voornemen bestaat om een maximum snelheid van 30 km per uur in te stellen is met dit onderzoek in kaart gebracht.

[16] Artikel 74, tweede lid Wet geluidhinder.

Industrielawaai

Figuur 11 Zonegrens industrieterrein

Het plangebied ligt buiten de zonegrens (50 dB(A) contour) om het industrieterrein, wat wil zeggen dat de Wet geluidhinder niet van toepassing is. De zonegrens geldt uitsluitend op 5 meter boven het lokaal maaiveld. Op grotere hoogte neemt de geluidafscherming door bijvoorbeeld de gebouwen op het industrieterrein af, zodat de geluidbelasting buiten de zone op grotere hoogte dan 5 meter hoger kan zijn dan 50 dB(A). Om te voldoen aan het criterium van de goede ruimtelijke ordening en om zo nodig het bestaande recht van de bedrijven te beschermen zijn dan maatregelen noodzakelijk als een toereikende geluidwering van de gevel. Om hieraan te voldoen is met het geluidmodel voor het zonebeheer de geluidbelasting vanwege het industrieterrein bepaald[17].

Oostgevel blok 2	2,4 meter	48 dB(A)
Oostgevel blok 2	5,5 meter	48 dB(A)
Oostgevel blok 2	8,6 meter	49 dB(A)
Oostgevel blok 2	11,7 meter	49 dB(A)
Oostgevel blok 2	14,8 meter	50 dB(A)
Oostgevel blok 2	17,9 meter	50 dB(A)

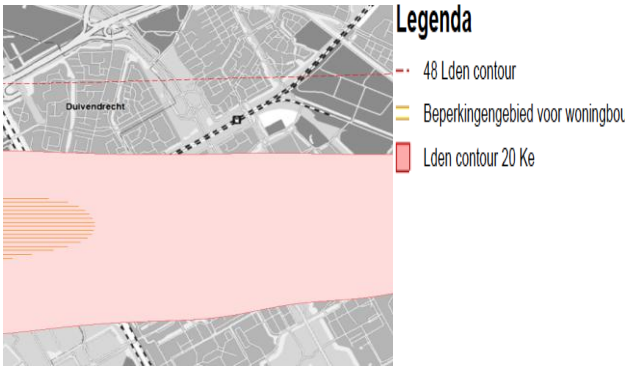

De grenswaarde voor de geluidbelasting vanwege het industrieterrein bedraagt 50 dB(A) zodat het bouwplan voldoet aan de grenswaarde. Industrielawaai wordt om die reden niet verder beoordeeld.

Schiphol

Het plangebied ligt buiten het beperkingengebied voor woningbouw, ingesteld met het oog op de geluidsbelasting[18]. Het plangebied ligt binnen de 48 dB contour. Deze 48 Lden contour vormt volgens de provincie het criterium voor het maximaal aantal ernstig geluidgehinderden per etmaal (= 239.000). Op grond van de GRO wordt daarom de cumulatie met het vliegverkeerslawaai beoordeeld.

[17] Omgevingsvergunning Bergwijkpark te Diemen: Onderzoek naar de optredende geluidbelasting vanwege industrieterrein Verrijn Stuart, rapportnummer Peutz O 15481-1-RA d.d. 6 november 2014

[18] als bedoeld in hoofdstuk 8, titel 8A.6 of artikel 10.17 van de Wet luchtvaart

Figuur 12: contouren Schiphol geluidkaart provincie

11 Uitgevoerde geluidberekeningen

11.1.1 Wegverkeerslawaai

De geluidberekening is conform de standrekenmethode II van Hoofdstuk 3 van het Reken- en Meetvoorschrift Geluid 2012 (RMG 2012) uitgevoerd met het rekenprogramma SRMII16 RMG 2012, formaat 2012 van Winhak. Gerekend is met 1 reflectie, een minimum zichthoek voor de reflectie van 2 graden en een vaste sectorhoek van 2 graden. De hoogte van de bodem, en de bodemabsorptie, de afscherming door geluidschermen, gebouwen, enzovoorts zijn berekend met de gegevens van het geluidmodel van Diemen.

11.1.1 Wegverkeerslawaai metro parallel aan de hoofdspoorweg

Het metroverkeerslawaai is op grond van artikel 3.3.a.van het van het RMG 2012 uitgevoerd conform de standaardrekenmethode II van hoofdstuk 4 van RMG 2012. De berekening is uitgevoerd met het rekenprogramma SRMSPLII6 RMG 2012, formaat 2012 van Winhavik.

11.1.1 Raccordementslawaai

Overeenkomstig hoofdstuk 6.3 van bijlage IV bij hoofdstuk 4 (railverkeerslawaai) van het RMG 2012 is de geluidbelasting berekend volgens de Handleiding Meten en Rekenen Industrielawaai. De reden is, dat de gemiddelde snelheid de treinen en de geluidemissie van de diesellocomotief te veel afwijken van het toepassingbereik van hoofdstuk 4 (railverkeerslawaai).
De berekening is uitgevoerd met het rekenprogramma indus10 HMRI 1999 multicore formaat 2010 van Winhavik (dirActivity). De reflectie op objecten verder dan 200 m uit de bron zijn niet berekend. Immisiepunten die op een afstand van meer dan 600 uit de bron zijn niet berekend.

Het GVB heeft de volgende bronsterkte en bronhoogte opgegeven.

Naam	Bronvermogen in dB(A)									Bron hoogte in m
	63Hz	123 Hz	250 Hz	500 Hz	1kH	2000 Hz	4000 Hz	8000 Hz	Totaal	
Sneltram rijden	78.50	87.00	89.60	91.20	89.60	94.10	91.60	80.20	98.94	1
Wegrijden Locomotief	71.10	89.30	101.60	108.80	103.80	102.40	108.80	98.90	113.35	2
Rijden Metro m5	75.00	84.00	93.00	100.00	108.00	108.00	109.00	100.00	113.58	1

De gemiddelde snelheid van een sneltram of een metro op het raccordement bedraagt 15 km per uur. Gemiddelde snelheid van een diesellocomotief op het raccordement bedraagt 30 km per uur.

De gegevens zijn in het model opgenomen als mobiele bronnen. De lijnbron is geschematiseerd als punt bronnen met een afstand van 50 m (sneltram en metro) en 30 m (diesellocomotief)[19].

11.1.1 Railverkeerslawaai hoofdspoorweg en metrospoorweg traject 416

Het metroverkeerslawaai is conform de standaardrekenmethode II van hoofdstuk 4 van RMG 2012 uitgevoerd met het rekenprogramma SRMSPLII6 RMG 2012, formaat 2012 van Winhavik.

12 Berekeningsresultaten

De berekeningsresultaten worden vanwege de omvang op verzoek beschikbaar gesteld.

13 Afwegingen geluidbeperkende maatregelen en conclusie

13.1 Maatregelen

Voor een ruim onderzoek en uitgebreide afweging ten aanzien van de geluidbeperkende maatregelen wordt verwezen naar het hogere grenswaardebesluit van 12 mei 2015 ten behoeve van bouwblok 1, 2 en toren 1 van het bouwplan Hollandpark.

Geluidschermen langs de gereconstrueerde Bergwijkdreef komen niet in aanmerking, onder andere vanwege de slechte ruimtelijke inpasbaarheid. Een geluidschermmaatregel wordt niet worden niet verder onderzocht.
De Bergwijkdreef heeft op korte afstanden het nodig aantal kruisingen en bochten. Dit wil zeggen dat de deklaag op veel plaatsen wordt blootgesteld aan brandwrijving. Door de bandenwrijving slijten de stille maar poreuze wegdektypes snel waardoor ook de geluiddempende werking snel achteruit gaat. Poreus asfalt komt om die reden niet in aanmerking als geluidbeperkende maatregel.
Het wegdek van de gerecontrueerde Bergwijkdreef dient te worden voorzien van steenmastiek asfalt, type sma-nl5. Dit is noodzakelijk omdat met het referentiewegdek (dicht asfalt beton, dab) de maximaal toelaatbare verhoging van 5 dB wordt overschreden ter plaatse van een aantal woningen aan de Bergwijkdreef.

De reconstructie kan eerst worden toegelaten nadat er hogere waarden zijn vastgesteld. Op grond van de artikelen 112 en 113 van de Wet geluidhinder dienen met betrekking tot de geluidwering van desbetreffende gevels maatregelen te worden getroffen waarmee de geluidbelasting binnen in de woning of een andere geluidgevoelig gebouw bij gesloten ramen wordt begrensd tot de binnengrenswaarde van 33 dB.

13.2 Woningen aan de Bergwijkdreef

Gezien het Geluidonderzoek Wet geluidhinder studentenhuisvesting Bergwijkdreef Diemen, 3 juli 2012 Referentie 20111874-10 van Cauberg-Huygen raadgevende ingenieurs is de voor deze woningen vastgestelde hogere grenswaarde gebaseerd op een verkeersintensiteit van 6644 mvt/etmaal, die hoger is dan verkeersintensiteit 2015. Voor de hand ligt dus dat de grenswaarde de heersende geluidbelasting is met als minimumwaarde 48 dB.

Met de figuur 13 worden de woningen verbeeld waar (uitgaande van het referentie wegdek) sprake van een reconstructie in de zin van de Wet geluidhinder (toename ten opzichte van

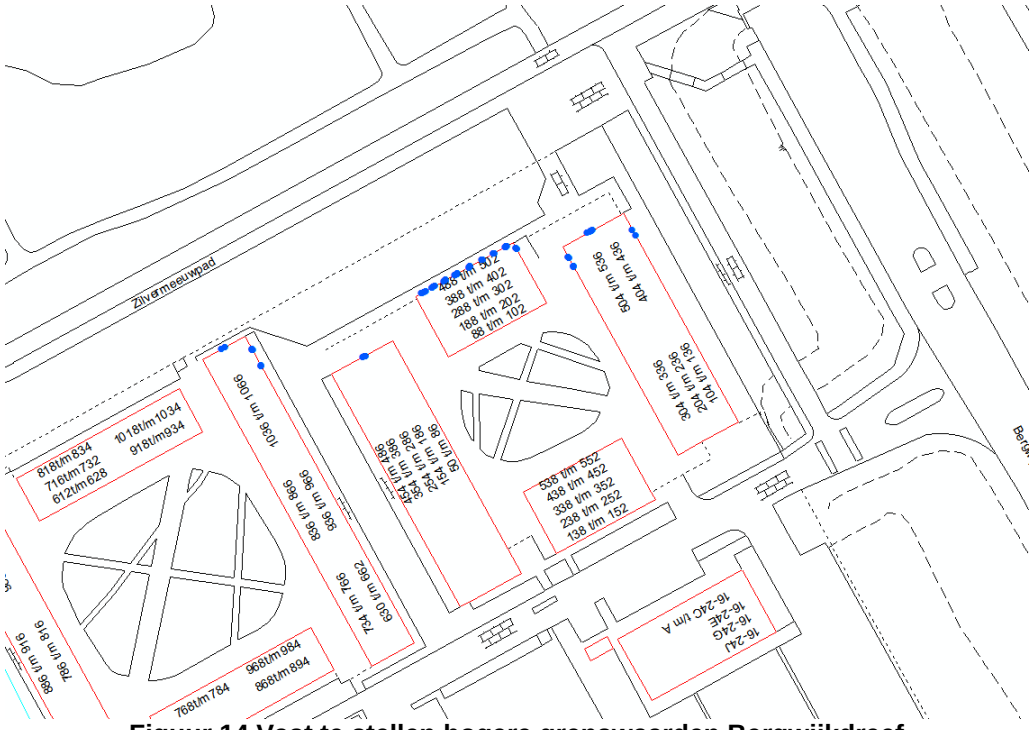

[19] De tijdsduurcorrectie voor het bepalen van de gemiddelde geluidbelasting in de etmaalperiode voor bijvoorbeeld de dieselloc wordt door het rekenprogramma bepaald door de tijd te berekenen om met 30km/h 30 m te overbruggen en dat te delen door tijd van de gehele periode.

de grenswaarde van 2 dB of meer) en waarvoor een hogere grenswaarde moeten worden vastgesteld

Figuur 13 Reconstructie Wet geluidhinder

Steenmastiek asfalt van het type sma-nl5 is stiller dan het referentiewegdek. De woningen waarvoor uitgaande van sma-nl5 een hogere grenswaarde moet worden vastgesteld worden als volgt verbeeld.

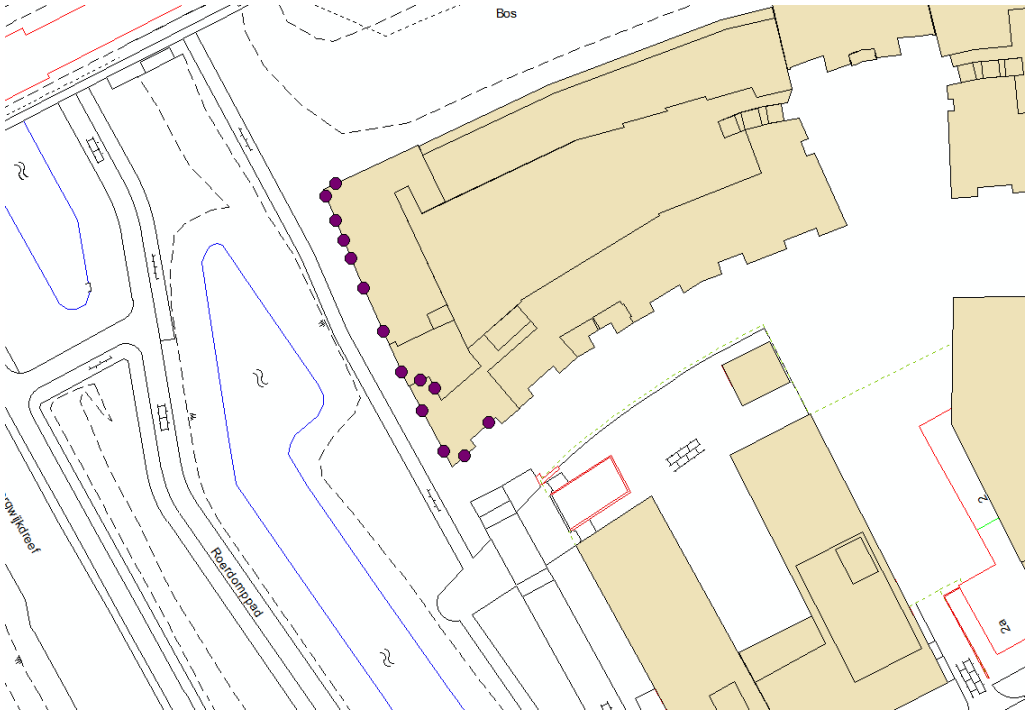

Figuur 14 Vast te stellen hogere grenswaarden Bergwijkdreef

Voor 61 woningen moet een hogere grenswaarde worden vastgesteld van 49 tot en met 53 dB.

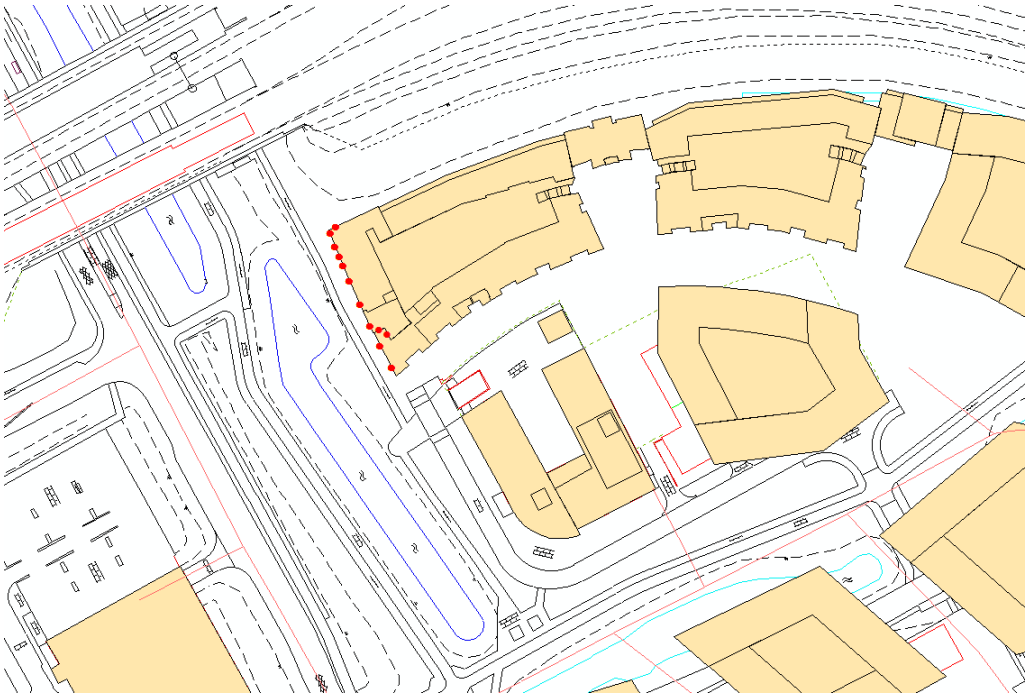

13.3 Woningen bouwblok 1

De heersende geluidbelasting is lager dan de hogere grenswaarde van het in procedure zijnde hogere grenswaarde besluit. Het hogere grenswaardebesluit is gebaseerd op de verkeersintensiteit 2030. De verkeersintensiteit 2030 is duidelijk hoger dan de verkeersintensiteit 2015. De grenswaarde is daarom de heersende geluidbelasting met als minimum 48 dB.
De woningen waar (uitgaande van het referentiewegdek) sprake is van een reconstructie in de zin van de Wet geluidhinder worden als volgt verbeeld.

Figuur 15 Reconstructie Wet geluidhinder

Steenmastiek asfalt van het type sma-nl5 is stiller dan het referentiewegdek. De woningen waarvoor uitgaande van sma-nl5 een hogere grenswaarde moet worden vastgesteld worden als volgt verbeeld.

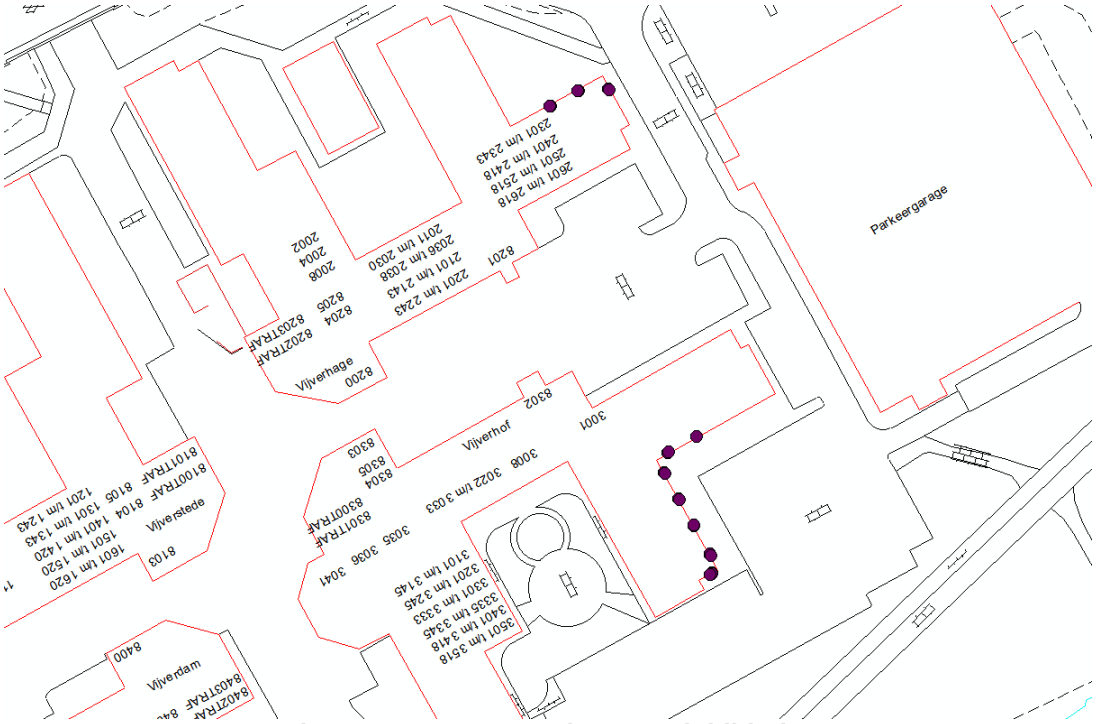

Figuur 16: Vast te stellen hogere grenswaarden Blok1

Voor 45 woningen moet een hogere grenswaarden worden vastgesteld variërend van 49 tot en met 53 dB.

13.4 Woningen aan de Dalsteindreef

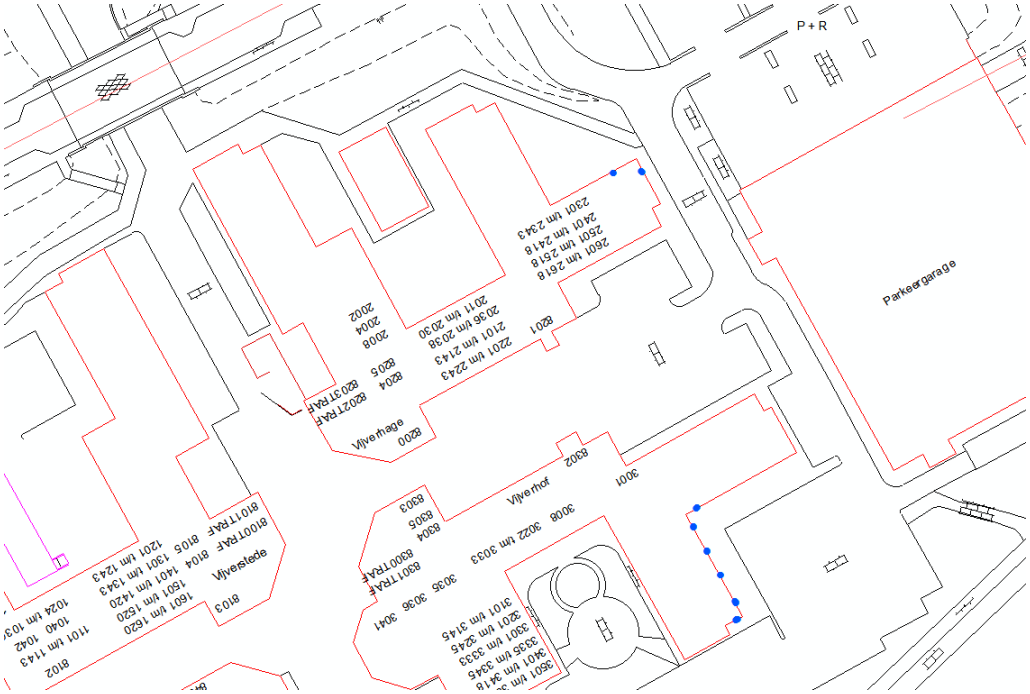

De grenswaarde bedraagt 48 dB: de woningen waren op 1 januari 2007 niet aanwezig en er is eerder geen hogere grenswaarde vanwege de Bergwijkdreef vastgesteld.

De woningen waar (uitgaande van het referentiewegdek) sprake is van een reconstructie in de zin van de Wet geluidhinder worden als volgt verbeeld.

Figuur 17 Reconstructie Wet geluidhinder

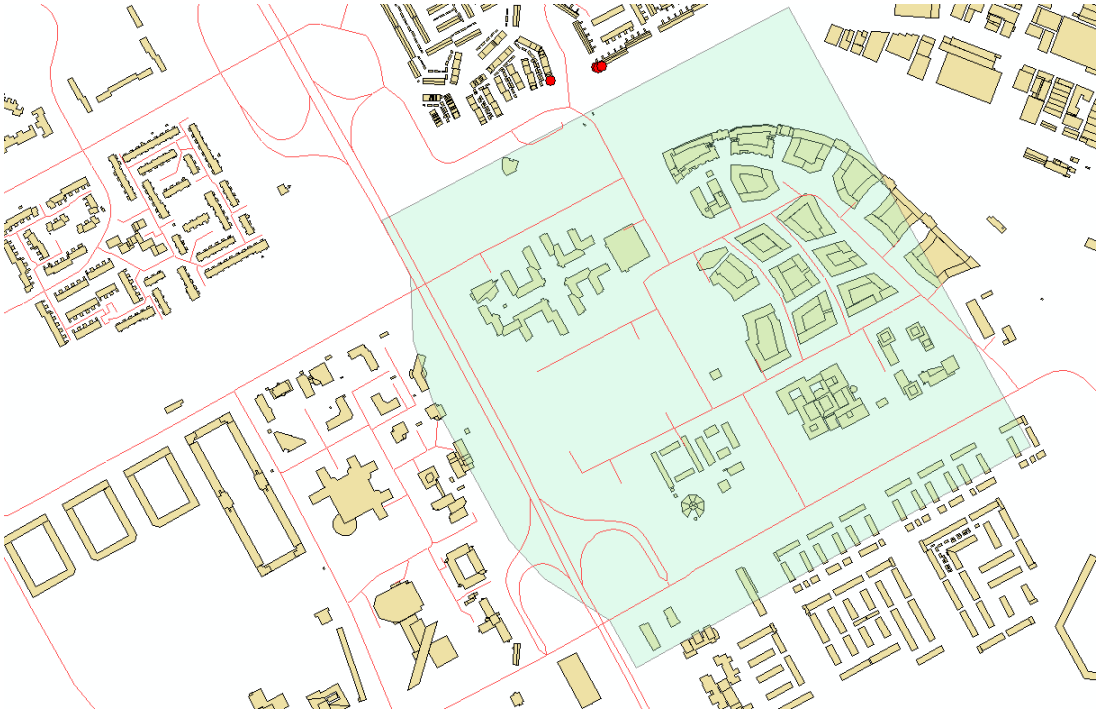

De te vast te stellen hogere grenswaarden worden als volgt verbeeld.

Figuur 18 Vast te stellen hogere grenswaarden Dalsteindreef

Voor 13 woningen moet een hogere grenswaarde worden vastgesteld variërend van 49 tot en met 50 dB.

14 Toename 2 dB of meer niet te reconstrueren delen Bergwijkdreef en de andere wegen in het studiegebied

Figuur 19 Reconstructiezone Bergwijkdreef en de toename van 2 dB buiten die zone

Het gaat hier om een toename van 2 dB van de geluidbelasting vanwege de Bergwijkdreef ter plaatse van 3 woningen, 1 in de wijk Polderland en 2 in de wijk Kruidenhof.

Figuur 20 Gooiseweg toename 2 dB of meer

Het gaat bij de Gooiseweg om een toename van 2 tot en met 4 dB ter plaatse van 100 woningen:

- 1 in de wijk Biesbosch

- 3 in de wijk Polderland
- 92 aan de Bergwijkdreef
- 4 in aan de Dalsteindreef
- De Hogeschool Holland

Ter hoogte van Bergwijkpark is de nieuwbouw, de reflectie daarop wellicht de oorzaak van deze toename.

Figuur 21 Diemerdreef toename 2 dB of meer.

Ter plaatse van 92 woningen neemt de geluidbelasting vanwege de Diemerdreef toe met 2 dB.

Figuur 22

Het gaat om een toename van de geluidbelasting vanwege de Eekholt van 5 dB ter plaatse van het gebouw Nienoord 5-11, dat gebruik kan worden als geluidgevoelig gebouw.

15 Samenloop van geluid

15.1 Inleiding

De samenloop van grenswaarden overschrijdende geluidbelastingen vanwege meer dan een geluidbron mag niet leiden tot een onaanvaardbare geluidsbelasting[20]. Dit, is het tweede hogere grenswaarde criterium.

De cumulatie is berekend vanwege alle geluidbronnen ongeacht de vraag of de grenswaarde wordt overschreden, dus de cumulatie van de grenswaarde overschrijdende Wet geluidhinder bronnen, het luchtvaartlawaai en het wegverkeerslawaai van de wegen zonder zone.

15.2 Berekening

De gecumuleerde geluidbelasting vanwege is berekend conform het Reken- en Meetvoorschrift Geluid 2012. Hierbij wordt de hinderlijkheid uitgedrukt in wegverkeerslawaai met de volgende formule.

$L^*_{RL} = 0{,}95\ L_{RL} - 1{,}40$

- L^*_{RL} is de geluidsbelasting vanwege de spoorweg uitgedrukt in wegverkeerslawaai
- L_{RL} is de geluidbelasting van de spoorweg.

$L^*_{LL} = 0{,}98\ L_{LL} + 7{,}03$

- L^*_{LL} is de geluidsbelasting vanwege luchtvaartlawaai uitgedrukt in wegverkeerslawaai
- L_{LL} is de geluidbelasting vanwege de luchtvaartlawaai in dB.

[20] Artikel 110a, zesde lid Wet geluidhinder

$L^*_{IL} = 1{,}00\ L_{IL} + 1{,}00$

- L^*_{IL} is de geluidsbelasting vanwege het industrieterrein uitgedrukt in wegverkeerslawaai
- L_{IL} is de geluidbelasting vanwege het industrieterrein.

Op de geluidbelasting vanwege een weg wordt geen aftrek ex artikel 110g van de Wet geluidhinder toegepast.

Het berekeningsresultaat is opgenomen in de bijlage.

15.3 Conclusie samenloop van geluid

Het berekeningsresultaten van de gecumuleerde geluidbelasting, uitgedrukt in wegverkeerslawaai, worden hier verbeeld als volgt.

Figuur 23: groen 56 – 60 dB, rood 60-65 dB en paars 65-66 dB

Figuur 24: Lcum 2030 – Lcum2015: groen 0 dB, blauw 1 dB, rood 2 dB en magenta 3 dB

De gecumuleerde geluidbelasting overschrijdt de door de wetgever maximaal toelaatbaar geachte geluidbelasting vanwege een weg in stedelijk gebied van 68 dB (63+5) niet. De toename bedraagt niet meer dan 3 dB. De samenloop leidt vanuit deze invalshoeken niet tot een onaanvaardbare geluidbelasting.

16 Samenvatting en conclusie

De geluidbelasting in de huidige en de toekomstige situatie is conform de Wet geluidhinder berekend en getoetst.

Ter plaatse van een aantal woningen aan de Dalsteindreef, de Bergwijkdreef en in blok1 is sprake van een reconstructie in de zin van de Wet geluidhinder. Ter plaatse van een aantal woning aan de Bergwijkdreef wordt zonder het treffen van maatregelen bovendien de maximaal toelaatbare toename van 5 dB overschreden.
Een geluidschermmaatregel komt niet in aanmerking vanwege de slechte ruimtelijke inpasbaarheid. Poreus asfalt dat vanwege die porositeit een geluiddempende werking heeft ten opzichte van het referentiewegdek (dicht asfalt beton) komt niet in aanmerking: er zijn te veel kruisingen en bochten waar deze geluiddemping door slijtage en vergruizing van het poreuze asfalt te snel afneemt. Steen mastiek asfalt type sma-nl5 is slijtvast, dringt de geluidbelasting terug met circa 1 dB en begrenst de toename ter plaatse van de woningen aan de Bergwijkdreef tot ten hoogste 5 dB.

Uitgaande van sma-nl5 dienen voor de geluidbelasting vanwege de Bergwijkdreef hogere grenswaarden te worden vastgesteld variërend van:

- 49 tot en met 50 dB voor 13 woningen aan de Dalsteindreef;
- 49 tot en met 53 dB voor 45 woningen in blok 1;
- 49 tot en met 53 dB voor 61 woningen aan de Bergwijkdreef.

De samenloop van de geluidbelastingen vanwege het gezoneerde wegverkeerslawaai, de 30 km per uur wegen, het railverkeerslawaai vanwege de hoofdspoorweg en de metro, het industrielawaai vanwege het raccordement en het industrieterrein en het luchtvaartlawaai leidt niet tot een onaanvaardbare geluidbelasting. Om de binnengrenswaarde te kunnen waarborgen kan worden uitgegaan van de gecumuleerde geluidbelasting.

De toename van de geluidbelasting van het niet te reconstrueren deel van de Bergwijkdreef en de andere op de Bergwijkdreef aangesloten wegen in het studiegebied met 2 dB of meer is in kaart gebracht.
De geluidbelasting vanwege de:

1) Bergwijkdreef neem toe tot en met 2 dB toe ter plaatse 3 woningen, 2 in de wijk Kruidenhof en 1 in de wijk Polderland;
2) Eekholt neemt toe tot en met 5 dB toe ter plaatse van het gebouw aan Nienoord, dat gebruik mag worden als geluidgevoelig gebouw;
3) Diemerdreef neem toe tot en met 2 dB ter plaatse van 92 woningen.

Opgemerkt wordt dat ook de geluidbelasting Gooiseweg toeneemt tot en met 4 dB ter plaatse van een groot aantal woningen. Dit als gevolg van niet alleen de ontwikkeling ter plaatse van Bergwijkpark Noord maar ook de ontwikkelingen buiten Diemen.

Voor deze toenames kan geen hogere grenswaarde worden vastgesteld en kunnen op grond van de Wet geluidhinder ook geen geluidbeperkende maatregelen worden verlangd.

Cul5	Lcum 2015 alle wegen en spoorwegen, industrie en vlieg verkeerslawaai, uitgedrukt in dB wegverkeerslawaai
CSMA	Lcum 2030 alle wegen en spoorwegen, industrie en vlieg verkeerslawaai Bergwijkdreef met SMA uitgedrukt in dB wegverkeerslawaai
DRec	Verschil Lden Bergwijkdreef met DAB groter dan 1,49 dB tussen 2015 en 2030, conform artikel 77 Wgh en artikel 3.6 van het RMG2012
Rec	Reconstructie in de zin van de Wet geluidhinder: J = ja / N = neen / NB = toename 2 dB of meer buiten reconstructiezone
LDA	Lden Bergwijkdreef 2030 uitgaande van DAB, waar mee is bepaald of sprake is van een reconstructie
HS	Vast te stellen hogere grenswaarde Bergwijkdreef uitgaande van wegdektype sma-nl5
DBR	Verschil Lden Boven Rijkersloot groter dan 1,49 dB tussen 2015 en 2030, conform artikel 77 Wgh en artikel 3.6 van het RMG2012
DdA	Verschil Lden Daalwijkdreef groter dan 1,49 dB tussen 2015 en 2030, conform artikel 77 Wgh en artikel 3.6 van het RMG2012
Ddl	Verschil Lden Dalsteindreef groter dan 1,49 dB tussen 2015 en 2030, conform artikel 77 Wgh en artikel 3.6 van het RMG2012
Ddi	Verschil Lden Diemerdreef dan 1,49 dB tussen 2015 en 2030, conform artikel 77 Wgh en artikel 3.6 van het RMG2012
De	Verschil Lden Eekholt groter dan 1,49 dB tussen 2015 en 2030, conform artikel 77 Wgh en artikel 3.6 van het RMG2012
Dg	Verschil Lden Gooiseweg groter dan 1,49 dB tussen 2015 en 2030, conform artikel 77 Wgh en artikel 3.6 van het RMG2012
Dcw	Verschil als wegverkeerslawaai gecumuleerde geluidbelasting 2015 en 2030, Bergwijkdreef met sma-nl5
G	Gebiedsdeel waarneempunt
