1. Inleiding

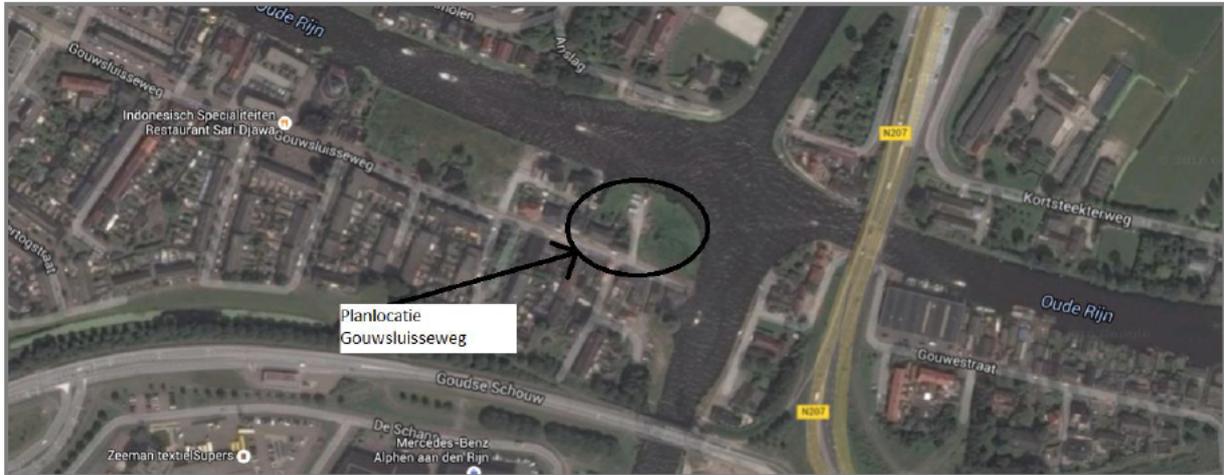

In opdracht van Efy-group is een akoestisch onderzoek uitgevoerd voor de realisatie van een woningbouwplan aan de Gouwsluisseweg te Alphen aan de Rijn. Ter hoogte van de planlocatie is het voornemen 7 nieuwe rijtjeswoningen en 2 vrijstaande woningen op te richten. Deels zullen bestaande woningen worden vervangen.

Deze rapportage is het vervolg op het akoestisch onderzoek dat in 2020 door Soundforceone BV is uitgevoerd (Akoestisch onderzoek gevelbelasting wegverkeerslawaai woningbouwplan Gouwsluisseweg te Alphen aan de Rijn projectnummer Alph202037 d.d. 28-4-2020). Ten opzichte van de voorgaande versie 1.0 is in deze rapportage de ligging van de vrijstaande woningen aangepast en gebaseerd op de bouwvlakken uit het ontwerpbestemmingsplan in plaats van de situatietekening.

In het geval van de realisatie van nieuwe geluidgevoelige bestemmingen geldt voor wegverkeer een voorkeerswaarde van 48 dB en afhankelijk van een binnenstedelijke of buitenstedelijke situatie geldt een maximale grenswaarde van 63 dB en 53 dB. Bij overschrijding van de voorkeerswaarden kan onder voorwaarden een hogere waarde worden vastgesteld. Nabij het plangebied aan de liggen de volgende gezoneerde geluidsbronnen die het plangebied belasten:

- N207
- Oranje Nassausingel
- Goudse Schouw
- Kortsteekterweg
- Paltrokmolen
- Lokale wegen met een 30 km/u regime (o.a. Gouwsluisseweg en deels Kortsteekterweg en Paltrokmolen)

Verondersteld wordt dat het vaarverkeer op de Gouwe en de Oude Rijn niet dusdanig intensief dat in het kader van een goede ruimtelijke ordening akoestische berekeningen nodig zijn. De gevelbelasting als gevolg van de wegen met een 30 km/u regime dienen onderzocht te worden in het kader van een goede ruimtelijke ordening. De onderstaande figuur 1 geeft een overzicht van de ligging van de planlocatie en de betreffende wegen en figuur de ligging van de bebouwing.

Figuur 1. Planlocatie Gouwsluisseweg Alphen aan de Rijn (bron Google maps)

Figuur 2. Uitsnede verbeelding ontwerp bestemmingsplan Woningbouw Gouwsluisseweg, Alpen aan den Rijn

2. Toetsingskader

2.1 Algemeen

Volgens de Wet geluidhinder geldt voor alle nieuw te bouwen geluidsgevoelige bestemmingen die in een geluidszone van een weg zijn gelegen een voorkeurswaarde van 48 dB. Als deze waarde wordt overschreden kan het bevoegd gezag onder voorwaarden een hogere waarde vaststellen. Deze hogere waarde is aan de in de Wet geluidhinder opgenomen plafondwaarde gebonden. Voor woningen in binnenstedelijk gebied geldt een maximaal toegestane geluidsbelasting van 63 dB.

De voorkeurswaarde mag worden overschreden als geluidsbeperkende maatregelen onvoldoende doeltreffend zijn dan wel als deze voorzieningen om stedenbouwkundige, verkeerskundige, landschappelijke of om financiële redenen niet wenselijk zijn. Daarnaast moet worden voldaan aan het gemeentelijk beleid.

Op grond van ex artikel 110g Wgh moet voor wegverkeer voor toetsing van de berekende geluidbelasting op de gevel aan de grenswaarde een aftrek worden toegepast. Deze aftrek bedraagt voor wegen met een maximumsnelheid van 70 km/uur of meer 2 dB en voor wegen met een maximumsnelheid van minder dan 70 km/uur 5 dB.

Aanvullend geldt voor wegen waar de maximumsnelheid hoger of gelijk is aan 70 km/uur en de gevelbelasting bedraagt 56 dB een aftrek van 3 dB, bij een gevelbelasting van 57 dB is een aftrek van toepassing van 4 dB. De aftrek mag alleen worden toegepast bij het toetsen van de geluidbelasting aan de normstelling (Wgh) en niet bij de bepaling van de noodzakelijke gevelwering om aan het maximaal toelaatbare binnenniveau te voldoen (Bouwbesluit). Een overzicht van de normen voor nieuwe situaties is in tabel 1 opgenomen.

Tabel 1. Grenswaarden voor nieuwe en bestaande situaties

| Object | Locatie | nieuwe weg | Bestaande weg |
|----------------------|--|------------------|------------------|
| nieuwe woning | voorkeurswaarde | 48 | 48 |
| | max. stedelijk | 58 | 63 ²⁾ |
| | max. buitenstedelijk | 53 | 53 ¹⁾ |
| | max. binnen | 33 ³⁾ | 33 ³⁾ |
| Overig | max. binnen leslokalen, onderzoeks- en behandelruimten etc. | 28 | 38 |
| | max. binnen theorielokalen, ruimten voor patiëntenhuisvesting etc. | 33 | 43 |

- 1) voor agrarische bedrijfswoning 58 dB en voor woning bij vervanging buiten de bebouwde kom 58 dB en binnen de bebouwde kom 63 dB
- 2) bij vervanging 68 dB
- 3) eis uit Bouwbesluit

2.2 Lokaal beleid

Voor de gemeente Alphen aan de Rijn is de "Beleidsregel hogere waarden Omgevingsdienst Midden-Holland, d.d. april 2012" van toepassing.

Onderstaand zijn voor wegverkeerslawaai meest bepalende regels weergegeven voor vaststelling van hogere waarden.

Bij een geluidsbelasting hoger dan 53 dB dient:

- de woning een geluidsluwe gevel te hebben;
- de woning een geluidsluwe buitenruimte te hebben;

En dient de woning of het andere geluidgevoelige gebouw gerealiseerd te worden met een geluidsluwe gevel. Bij het van toepassing zijn van een geluidsluwe gevel dient op elke verdieping met één of meer verblijfsruimten, ten minste één verblijfsruimte (bij voorkeur in te richten als slaapkamer) aan de geluidsluwe gevel te zijn gesitueerd.

Tevens is in de beleidsregel het volgende opgenomen:

In de Omgevingsdienst Midden-Holland hanteren wij voor de geluidsluwe gevel de volgende uitgangspunten:

- *indien een woning of ander geluidsgevoelig gebouw wordt belast door één zoneringsplichtige bron, is een geluidsluwe gevel een gevel waar de voorkeursgrenswaarde voor deze bron niet wordt overschreden;*
- *indien een woning of ander geluidsgevoelig gebouw wordt belast door twee of meer zoneringsplichtige bronnen van één lawaaisoort (bijvoorbeeld twee wegen), is een geluidsluwe gevel een gevel waar de voorkeursgrenswaarde voor deze bron niet wordt overschreden door de som van de bronnen. Bij wegverkeerslawaai wordt dit bepaald inclusief aftrek artikel 110g Wet geluidhinder juncto artikel 3.6 Reken en meetvoorschrift geluidhinder 2006.*

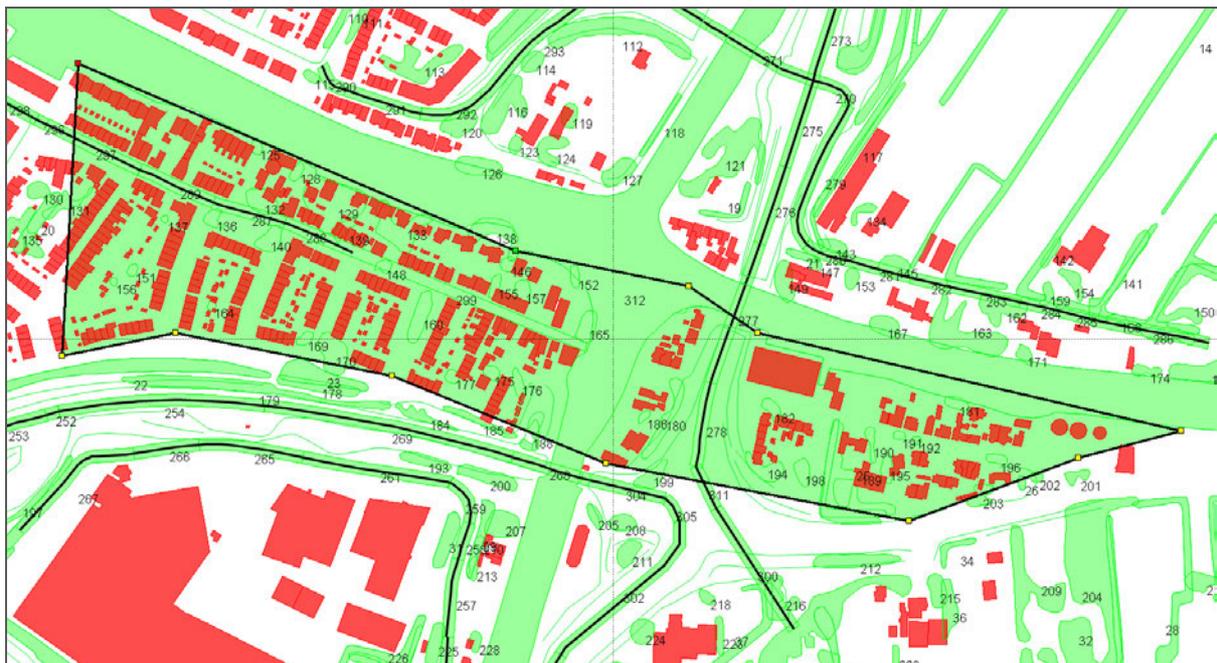

3. Uitgangspunten

De Omgevingsdienst Midden-Holland heeft op verzoek de verkeersintensiteiten op de betreffende wegen ter beschikking gesteld voor het jaar 2030. De nieuwe woningen komen in de zone van de N207, de Oranje Nassausingel, de Goudse Schouw, Paltrokmolen, Kortsteekterweg en De Schans te liggen.

Maar ligt ook in de nabijheid van de Gouwsluisseweg, een deel van de Paltrokmolen en het deel van de Kortsteekterweg die ter plaatse geen zone hebben omdat de maximale snelheid er 30 km/u bedraagt. Toetsing aan de Wgh voor deze wegen is dan niet van toepassing. Toetsing in het kader van een goede ruimtelijke ordening is nog wel aan de orde. De geluidsbelasting als gevolg van overige wegen is als niet relevant beschouwd en niet verder opgenomen in het onderzoek.

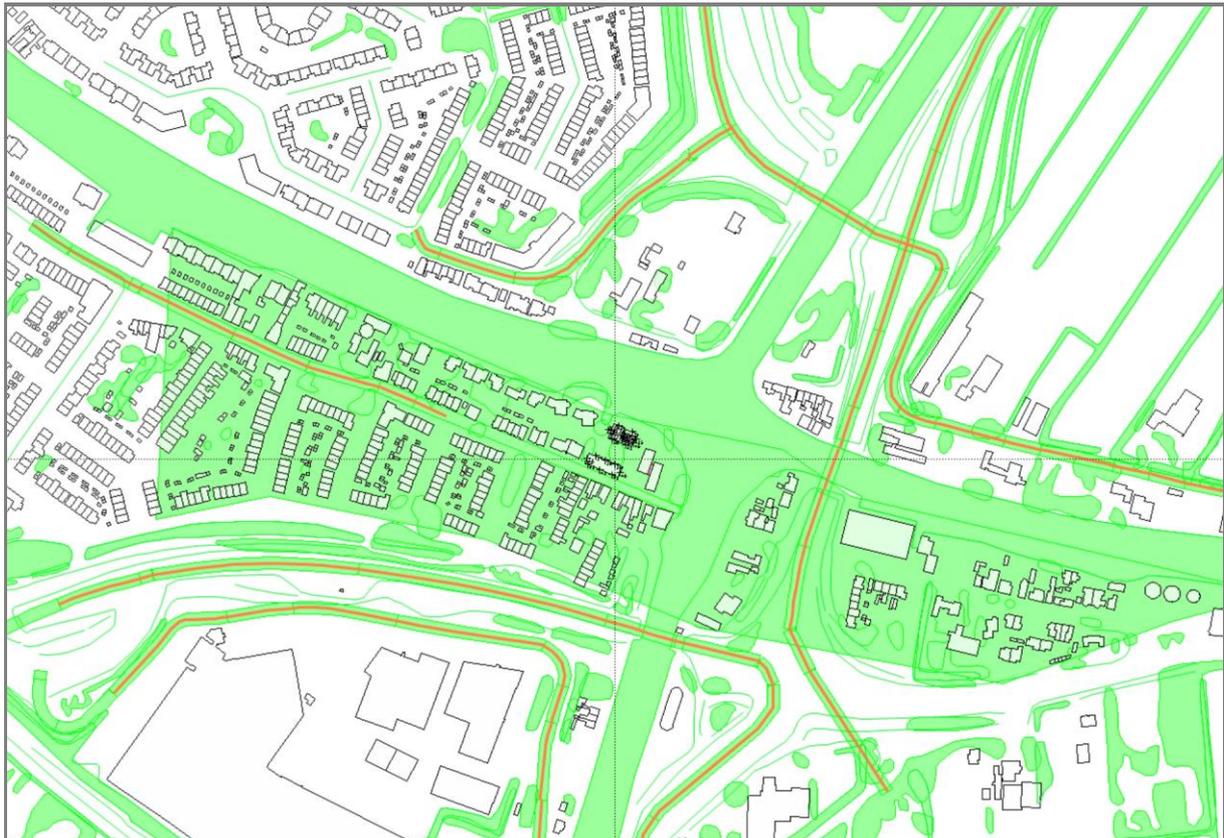

Ter plaatse van alle gezoneerde wegen nabij het plangebied geldt een maximale snelheid van 50, 70 en 80 km/u. De wegen zijn voorzien van het wegdektype fijn asfalt. Alleen ter plaatse van de Gouwsluisseweg en de Paltrokmolen is sprake van het wegdektype klinkers niet in keperverband. De brongegevens (snelheden, intensiteiten, wegdektype etc.) van de wegen zijn weergegeven in bijlage 1.

Voor het wegdek en overige harde gebieden is uitgegaan van een absorptiefactor 0 en voor de overige bodemgebieden is uitgegaan van een standaard absorptiefactor 1,0. Rondom het plangebied is uitgegaan van absorptiefactor 0. Voor tuinen is uitgegaan van een absorptiefactor 0,5. Daar waar reflecterende gebieden zoals water zachtere gebieden kruisen worden de harde gebieden in de berekeningen meegenomen als maatgevend. Dit is het geval voor bodemgebied 312. In de onderstaande figuur 3 is weergegeven waar die ligt en is te zien dat het wordt overlapt door harde gebieden, die van invloed zijn op de overdracht. In figuur 7 van de bijlage is te zien waar welke bodemgebieden liggen.

Figuur 3: Overzicht ligging bodemgebieden (bodemgebied 312 is geselecteerd)

De berekening van de gevelbelasting heeft ter plaatse van de nieuwbouw plaatsgevonden op 1,5 en 4,5 meter en bij de vrijstaande woningen ook op 7,5 meter ten opzichte van het lokale maaiveld. In de onderstaande figuur 4 is een overzicht gegeven van het rekenmodel.

Figuur 4: Overzicht rekenmodel wegverkeer

4. Resultaten

4.1 Inleiding

In bijlage 1 zijn de berekeningsresultaten voor de betreffende wegen weergegeven. De gevelbelasting is per weg of weggedeelte in groepen weergegeven:

- groep 0: gecumuleerde gevelbelasting (alle wegen tezamen excl. aftrek conform ex art 110g Wgh)
- groep 1: N207
- groep 2: Goudse schouw
- groep 3: Oranje Nassausingel/Kortsteekterweg (50 km/u)
- groep 4: Lokale wegen met een 30 km/u regime (o.a. Gouwsluisseweg en Paltrokmolen)
- groep 5: De Schans

4.2 Toetsing Wgh

Zoals blijkt uit figuur 1 van de bijlagen wordt de voorkeurswaarde van 48 dB inclusief aftrek conform ex art. 110g Wgh ter plaatse van de vrijstaande woningen overschreden als gevolg van de N207 en bedraagt maximaal 52 dB inclusief aftrek conform ex art. 110g Wgh. Ter plaatse van de rijtjeswoningen wordt de voorkeurswaarde niet overschreden. In de onderstaande figuur 5 is de gevelbelasting vanwege de N207 weergegeven.

Figuur 5: Overzicht gevelbelasting hoogste waarde N207 incl. 5 dB en 2 dB aftrek conform art 110g Wgh

Figuur 6: Overzicht gevelbelasting hoogste waarde Goudse Schouw incl. 5 dB aftrek conform art 110g Wgh

In de bovenstaande figuur 6 is de gevelbelasting als gevolg van de Goudse Schouw weergegeven. Hieruit blijkt dat de voorkeurswaarde van 48 dB inclusief aftrek conform ex art. 110g Wgh ter plaatse van de vrijstaande woningen wordt overschreden als gevolg van de Goudse Schouw en bedraagt maximaal 50 dB inclusief aftrek conform ex art. 110g Wgh. Ter plaatse van de rijtjeswoningen wordt de voorkeurswaarde niet overschreden.

Vanwege alle overige wegen of wegdelen wordt de 48 dB voorkeurswaarde niet overschreden. In figuren in de bijlagen zijn de gevelbelastingen van deze wegen weergegeven.

Vanwege de omliggende wegen met een 30 km/u regime bedraagt de gevelbelasting maximaal 39 dB exclusief aftrek conform art 110g Wgh. Deze wegen hebben geen zone en hoeven alleen in het kader van een goede ruimtelijke ordening te worden getoetst. Zou het kader van de Wgh gebruikt worden voor toetsing van een goede ruimtelijke ordening dan zou de gevelbelasting als gevolg van deze wegen voldoen aan de 48 dB voorkeurswaarde. Daarmee kan beredeneerd worden dat de goede ruimtelijke ordening als gevolg van die wegen en wegdelen niet in het geding is.

De gecumuleerde gevelbelasting van alle wegen tezamen exclusief aftrek conform ex art 110g Wgh bedraagt maximaal 57 en 58 dB (zie figuur 6 van de bijlagen) op de hoogste verdieping van de vrijstaande woningen. Op de begane grond van die woningen bedraagt de gecumuleerde gevelbelasting maximaal 52 dB. Op de rijtjeswoningen bedraagt de gevelbelasting voor de begane grond en de verdieping respectievelijk 50 dB en 54 dB.

Om iets te kunnen zeggen over het woon- en leefklimaat van het plan kan de methode Miedema worden gebruikt. Hierin wordt een correlatie tussen de geluidhinder en de hoogte van de geluidbelasting gemaakt. In de onderstaande tabel 2 is de classificering weergegeven die daarbij gebruikt wordt. Uit die classificering blijkt dat de gevelbelasting voor de twee vrijstaande woningen in het plan als matig te beschouwen is. Voor de rijtjeswoningen geldt de classificering matig tot goed. De gevelbelastingen liggen nog 10 dB onder de maximale grenswaarde voor binnenstedelijke

situaties uit de Wet geluidhinder. Ook zal de ligging van de woningen aan het water een positieve bijdrage leveren aan de leefkwaliteit.

Tabel 2. Classificering leefklimaat obv methode Miedema

| Geluidklasse | Beoordeling |
|--------------|-----------------|
| < 50 dB | Goed |
| 50 – 54 dB | Redelijk |
| 54 – 59 dB | Matig |
| 59 – 64 dB | Tamelijk slecht |
| 64 – 70 dB | Slecht |
| > 70 dB | Zeer slecht |

4.3 Lokaal Beleid

Uit de beleidsregel hogere waarden van de Omgevingsdienst Midden-Holland blijkt dat de woningen allemaal een geluidluwe gevel en buitenruimte moeten hebben als de gevelbelasting hoger is dan 53 dB. De geluidluwe gevel wordt als geluidluwe gevel beschouwd als ter plaatse van alle verdiepingen aan die gevel de gevelbelasting lager of gelijk is aan 48 dB Lden*(gevelbelasting alle wegen tezamen inclusief aftrek conform art 110g Wgh).

De gevelbelasting ligt op geen van de woningen boven de 53 dB. Echter zegt de beschouwing over geluidluwe gevels en dergelijke wel iets over beleving en woon- en leefklimaat. Daarom is dit wel beschouwd.

Voor het geluidluw zijn van de buitenruimte is het voldoende als de begane grond geluidluw blijkt te zijn. Uit de berekeningsresultaten van bijlage 1 blijkt dat alle woningen binnen het plan een geluidluwe buitenruimte hebben. De hoogste gevelbelasting Lden* die berekend wordt is 48 dB.

5. Maatregelen

5.1 Inleiding

Omdat de voorkeurswaarde als gevolg van het wegverkeer op de N207 en de Goudse Schouw overschreden wordt dient het effect van maatregelen te worden beschreven. Door het treffen van maatregelen kunnen de geluidsbelastingen worden gereduceerd. De systematiek in de Wgh is zodanig dat eerst moet worden beoordeeld of maatregelen aan de geluidsbron mogelijk zijn en daarna in het overdrachtsgebied tussen de bron en de woning. Blijken de maatregelen op zwaarwegende bezwaren te stuiten van stedenbouwkundige, verkeerskundige, landschappelijke of financiële aard dan heeft het bevoegd gezag de mogelijkheid tot het vaststellen van hogere waarden.

In de Wgh wordt een voorkeur uitgesproken voor de volgorde waarin de haalbaarheid van de diverse categorieën maatregelen onderzocht moet worden.

Deze volgorde is:

- a. bronmaatregelen (bijvoorbeeld stiller wegdek, lagere intensiteiten, wijziging vormgeving);
- b. overdrachtsmaatregelen (bijvoorbeeld schermen/wallen of in acht nemen grotere afstand);
- c. maatregelen bij de ontvanger (bijvoorbeeld gevelisolatie).

Dit hoofdstuk beschrijft het effect van een aantal maatregelvarianten die wat betreft wegverkeer onderzocht zijn. Voor railverkeerslawaai hoeven geen maatregelen te worden onderzocht omdat voldaan wordt aan de voorkeurswaarde. De volgende geluidsreducerende maatregelen zijn onderzocht.

5.2 Bron- en overdrachtsmaatregelen

Bronmaatregelen

De aanwezige wegdekverharding van de weg vervangen door een geluidarmer wegdek, bijvoorbeeld dunne deklagen B geeft een zodanige geluidreductie (circa 3 à 4 dB) dat op de waarneempunten voldaan kan worden aan de voorkeurswaarde van 48 dB. Het wegdek zal dan over een bepaalde lengte vervangen moeten worden. Daarbij bestaat het civieltechnische probleem dat de dunne deklagen vaak niet geschikt zijn voor toepassing op bruggen en kruispunten en bochten vanwege het wringen van zwaar verkeer. Hierdoor is de doeltreffendheid van de maatregel onvoldoende.

Overdrachtsmaatregelen

Aangezien de bovengenoemde bronmaatregel praktisch niet haalbaar is, is indicatief een overdrachtsmaatregel berekend. In de berekeningen is uitgegaan van de bestaande wegdektypen.

Om ter hoogte van de woningen op alle gevels te voldoen aan de voorkeurswaarde van 48 dB is een absorberend scherm langs de N207 van minimaal 10 meter hoogte ten opzichte van lokaal maaiveld met een lengte van 240 meter nodig en langs de Goudse Schouw van minimaal 10 meter hoogte ten opzichte van lokaal maaiveld met een lengte van 180 meter.

De kosten voor het aanleggen van dergelijke schermen is minimaal ongeveer € 1.200.000,- langs de N207 en € 900.000,- langs de Goudse Schouw.

De kosten van dergelijk schermen ten behoeve van een overschrijding ter plaatse van 2 woningen in het plan maken de maatregel financieel gezien niet doelmatig. Daarnaast zal deze maatregel op stedenbouwkundige bezwaren stuiten vanwege de hoogte.

5.3 Maatregelen bij de ontvanger

Indien maatregelen ter vermindering van de geluidbelasting onvoldoende doeltreffend zijn, dan wel overwegende bezwaren ontmoeten van financiële, stedenbouwkundige, verkeerskundige, vervoerskundige of landschappelijke aard en er een ontheffingsgrond aanwezig is, kan het bevoegd gezag besluiten om over te gaan tot het verlenen van hogere grenswaarden. In dit geval moeten de nieuwe woningen voldoen aan de grenswaarde voor het binnenniveau van 33 dB zoals bepaald in het Bouwbesluit. Voor de gecumuleerde gevelbelasting (exclusief aftrek conform art 110g Wgh) betekent dit (58 – 33 dB) dat een gevelwering van maximaal 25 dB behaald moet worden. Een standaard gevel die onder het Bouwbesluit gerealiseerd is heeft een minimale gevelwering van 20 dB. Afhankelijk van de ligging van de woning zijn aanvullende gevelmaatregelen nodig om aan het voorgeschreven binnenniveau te kunnen voldoen. Hiervoor dient een bouwakoestisch onderzoek te worden verricht dat de nodige gevelvoorzieningen beschrijft.

6. Conclusies en aanbevelingen

In opdracht van Efy-group is een akoestisch onderzoek uitgevoerd voor de realisatie van een woningbouwplan aan de Gouwsluisseweg te Alphen aan de Rijn. Ter hoogte van de planlocatie is het voornemen 7 nieuwe rijtjeswoningen en 2 vrijstaande woningen op te richten. Deels zullen bestaande woningen vervangen.

In het geval van de realisatie van nieuwe geluidgevoelige bestemmingen geldt voor wegverkeer een voorkeurswaarde van 48 dB en afhankelijk van een binnenstedelijke of buitenstedelijke situatie geldt een maximale grenswaarde van 63 dB en 53 dB. Bij overschrijding van de voorkeurswaarden kan onder voorwaarden een hogere waarde worden vastgesteld. Nabij het plangebied aan de liggen in de volgende gezoneerde geluidsbronnen die het plangebied belasten:

- N207
- Goudse Schouw
- Oranje Nassausingel
- Kortsteekterweg
- De Schans
- Lokale wegen met een 30 km/u regime (o.a. Gouwsluisseweg en Paltrokmolen)

Uit het onderzoek is gebleken dat vanwege de N207 de gevelbelasting maximaal 52 dB inclusief aftrek conform art 110g Wgh bedraagt. Op de twee vrijstaande woningen in het plan wordt de 48 dB grenswaarde overschreden. Voor de rijtjeswoningen wordt voor deze weg de 48 dB grenswaarde niet overschreden.

Uit het onderzoek is gebleken dat vanwege de Goudse Schouw de gevelbelasting maximaal 50 dB inclusief aftrek conform art 110g Wgh bedraagt. Op een vrijstaande woning in het plan wordt de 48 dB grenswaarde overschreden. Voor de rijtjeswoningen wordt voor deze weg de 48 dB grenswaarde niet overschreden.

Uit toetsing aan de beleidsregels hogere waarden van de Omgevingsdienst Midden-Holland blijkt dat er met een gevelbelasting van 50 of 53 dB geen aanvullende regels gelden vanuit de beleidsregels hogere waarden. Deze worden wel in het rapport behandeld omdat het één en ander zegt over het te verwachten woon- en leefklimaat.

Uit de berekeningen blijkt dat ter plaatse van de nieuwe woningen als gevolg van de overige wegen wordt voldaan aan de 48 dB voorkeurswaarde en geen hogere waarde nodig is. Daarmee wordt voldaan aan de grenswaarden uit de Wgh en is een goede ruimtelijke ordening wat betreft geluid niet in het geding.

Als sprake is van een overschrijding van de voorkeurswaarde dient onderzocht te worden of bron- en of overdrachtsmaatregelen mogelijk zijn. Uit het onderzoek is gebleken dat bron- en overdrachtsmaatregelen tot zowel financiële als civieltechnische bezwaren leiden.

Het bevoegd gezag heeft daarom de mogelijkheid om hogere waarden vast te stellen. Daarbij zullen extra gevelmaatregelen nodig zijn om aan de voorgeschreven binnengrenswaarde uit het Bouwbesluit (van 33 dB) te kunnen voldoen. Daarvoor zal een bouwakoestisch onderzoek moeten uitwijzen welke gevelmaatregelen nodig zijn. In de onderstaande tabellen is weergegeven welke hogere waarden moeten worden vastgesteld.

| Nummer toetspunt | Omschrijving | Meest maat-gevende hoogte in m boven maaiveld | Geluidsbelasting 2030 incl. aftrek art. 110g Wgh in dB Lden |
|------------------|----------------------|---|---|
| | | | N207 |
| 73 | Vrijstaande woning 1 | 7.5 | 51 |
| 79 en 77 | Vrijstaande woning 2 | 7.5 | 52 |

| Nummer toetspunt | Omschrijving | Meest maat-gevende hoogte in m boven maaiveld | Geluidsbelasting 2030 incl. aftrek art. 110g Wgh in dB Lden |
|------------------|----------------------|---|---|
